Foreword

Congratulations on choosing a SUBARU vehicle equipped with EyeSight™. EyeSight incorporates the latest driver assistance features available from SUBARU, including such features as Adaptive Cruise Control, a Lead Vehicle Start Alert and a Lane Departure and Lane Sway Warning, all of which are designed to assist the driver in making decisions and increase driver comfort and convenience. Initially, the operation and use of the various EyeSight features may be unfamiliar to you. That is why we urge you to read this manual carefully before using EyeSight. We also recommend that you first take the time to test EyeSight in order to experience its features for yourself so that you can become familiar with their operation.

Please keep in mind that it is the responsibility of drivers to operate their vehicles safely at all times. Drivers should always remain alert and should never become complacent while operating their vehicles because of the presence of EyeSight. EyeSight is never a substitute for active driver involvement and it may not operate optimally under all driving conditions.

This booklet is a supplement to the Owner’s Manual for your SUBARU vehicle and contains a detailed description of EyeSight. It should be read in conjunction with your Owner’s Manual so that you will gain a thorough understanding of the proper operation of your vehicle.

The information, specifications and illustrations found in this booklet are those in effect at the time of printing. SUBARU CORPORATION reserves the right to change specifications and designs at any time without prior notice and without incurring any obligation to make the same or similar changes on vehicles previously sold.

Please keep this booklet together with your Owner’s Manual and leave it in the vehicle at the time of resale. The next owner will need the information it contains.

About EyeSight

EyeSight

EyeSight is a driving support system that uses a range of functions to assist the driver in making decisions in order to provide for more safe and comfortable driving and to reduce driver fatigue. Making use of images created by the stereo camera specially designed by SUBARU, EyeSight detects the vehicle in front, obstacles, traffic lanes and other items.

**WARNING**

Drivers are responsible for driving safely. Always comply with all traffic rules and regulations regardless of the fact that your vehicle is equipped with EyeSight. Always maintain a safe following distance between your vehicle and the vehicle in front of you, pay attention to your surroundings and driving conditions, and take necessary actions in order to maintain a safe following distance.

Never attempt to drive relying on EyeSight alone. EyeSight is intended to assist the driver in making decisions in order to reduce the risk of accidents or damage and lessen the burden on the driver.

When an EyeSight warning is activated, pay attention to what is in front of you and to your surroundings, and take necessary actions. This system is not designed to support driving in poor visibility or in extreme weather conditions, or to protect against careless driving when the driver is not paying complete attention to the road ahead. It also cannot prevent collisions from occurring in all driving conditions. There are limits to the EyeSight recognition performance and control performance. Be sure to read the instructions for each function before using the system, and always use it properly. Improper use may lead to failure of control performance, which could cause an accident.

Refer to the following pages for each function:

- For the Pre-Collision Braking System, refer to page 27.
- For Adaptive Cruise Control, refer to page 41.
- For Lane Keep Assist, refer to page 66.
- For Pre-Collision Throttle Management, refer to page 76.
- For Lane Departure Warning, refer to page 82.
- For Lane Sway Warning, refer to page 85.
- For Lead Vehicle Start Alert, refer to page 88.
- For Conventional Cruise Control, refer to page 90.
In LHD vehicles, EyeSight is configured for driving on the right-hand side of the road. However, it can be reconfigured by changing the Driving Lane Customize setting for driving on the left-hand side.*

⇒ Refer to page 110.

If the setting for the traffic lane (driving side of the road) does not match the traffic lane, full EyeSight performance may not be available.

*: Characteristics and settings that are affected by specific differences between RHD and LHD vehicles cannot be changed.

- The system may not operate correctly under the conditions listed below.
  - When these conditions occur, turn off the Pre-Collision Braking System. Also, do not use Adaptive Cruise Control, Lane Keep Assist or Conventional Cruise Control.
  - The tire pressure is not correct.*1
  - The temporary spare tire is installed.*1
  - Tires that are unevenly worn or tires with uneven wear patterns are installed.*1
  - Tires that are the wrong size are installed.*1
  - A flat tire has been fixed temporarily with a tire repair kit.
  - The suspension has been modified (including a genuine SUBARU suspension that has been modified).
  - An object that obstructs the stereo camera’s view is installed on the vehicle.
  - The headlights are dirty or they have snow and ice or dirt on them. (Objects are not correctly illuminated and are difficult to detect.)
  - The optical axes are not aligned correctly. (Objects are not correctly illuminated and are difficult to detect.)
  - The lights including headlights and fog lights have been modified.
  - Vehicle operation has become unstable due to an accident or malfunction.
  - The brake system warning light is illuminated in red.*2
  - A heavy cargo is loaded onto or inside the vehicle.
  - The maximum number of occupants is exceeded.
  - The combination meter is not operating properly; such as when the lights do not illuminate, the beeps do not sound, the display is different from when it is normal, etc.*3

- The system will not operate correctly in the following conditions. Do not use Adaptive Cruise Control, Lane Keep Assist or Conventional Cruise Control.
  - The wheels are out of balance (e.g., the balance weight is removed or misaligned).*1
  - The wheels are out of alignment.*1
  - A trailer or another vehicle, etc. is being towed.
• The system may not operate properly under the following conditions. Do not use Lane Keep Assist.
  - There is an abnormal vibration in the steering wheel or the steering wheel is heavier than usual.
  - The steering wheel has been replaced with parts other than genuine SUBARU parts.
*1: The wheels and tires have functions that are critically important. Be sure to use the correct ones. For details, refer to the Owner’s Manual for your vehicle.
*2: If the brake system warning light does not turn off, immediately pull the vehicle over in a safe place and contact a SUBARU dealer to have the system inspected. For details, refer to the Owner’s Manual for your vehicle.
*3: For details about the combination meter, refer to the Owner’s Manual for your vehicle.
• The characteristics of the stereo camera are similar to those of human eyes. For this reason, conditions that make it difficult for the driver to see in the forward direction have the same effect on the stereo camera. They also make it difficult for the system to detect vehicles, obstacles, and traffic lanes.

• Detection by the EyeSight system is limited to objects that are within the range of the stereo camera’s field of view. Also, after an object enters the range of the camera’s field of view, it may take some time for the system to detect it as a controllable target and to warn the driver.

Low objects surrounding the vehicle cannot be detected.

• Under the conditions listed below, it will become more difficult for the system to detect the vehicle in front, motorcycles, bicycles, pedestrians and obstacles on the road, and lane markers. Also, EyeSight may temporarily stop operating. However, the temporary stop will be canceled once these conditions have improved and the vehicle is driven for a short period of time.
  - Bad weather (for example heavy rain, a blizzard or thick fog). In particular, the system is more likely to temporarily stop operating when there is an oil film adhering to the windshield, a glass coating has been applied, or poorly performing wipers are used.
  - Strong light is coming from the front (sunlight or headlight beams of oncoming traffic, etc.).
  - The windshield washer is in use.
  - Raindrops, water drops, or dirt on the windshield are not wiped off sufficiently.
  - The windshield has become fogged, scratched, or snow, dirt, dust or frost has adhered to it, or it is otherwise affected. These will reduce the stereo camera’s field of view.
- The vehicle is tilted at an extreme angle due to loaded cargo or other factors.
- Visibility is poor due to sand, smoke or water vapor blowing in the wind, or the front vision is obscured due to water splashes, snow, dirt or dust stir up generated by the vehicle in front or oncoming traffic.
- The stereo camera’s field of view is obstructed (for example by a canoe on the roof of the vehicle).
- Through the entrance or exit of a tunnel
- The rear aspect of the vehicle in front is low, small or irregular (for example a low bed trailer, etc.).
- The obstacle is a fence, a wall or a shutter, etc. with a uniform pattern (a striped pattern, brick, etc.) or with no pattern in front.
- The obstacle is a wall or door made of glass or a mirror in front.
- Driving at night or in a tunnel when there is a vehicle in front that does not have its taillights on
- Driving through a banner or flag, low branches on a tree or thick/tall vegetation
- On steep uphill or downhill grades
- The stereo camera is obstructed by a hand, etc. (If even one of the lenses is obstructed, the system does not operate properly.)
- It is completely dark and no objects are detected.
- The area around the vehicle has a uniform color (such as when completely covered in snow, etc.).
- Accurate detection is not possible due to reflections in the windshield.

- Under the conditions listed below, EyeSight may temporarily stop operating. If this occurs, EyeSight will resume operating when the conditions improve.
  - The temperature inside the vehicle is high, such as after the vehicle was left in bright sunshine, or the temperature inside the vehicle is low, such as after the vehicle was left in an extremely cold environment.
  - Immediately after the engine starts

- Under the conditions listed below, it is difficult to recognize vehicles in front, motorcycles, pedestrians, obstacles on the road, traffic lanes, etc. Also, the EyeSight system may temporarily stop operating. If the EyeSight system repeatedly stops operating several times, contact a SUBARU dealer and have the system inspected.
  - The stereo camera lenses are smeared such as from fingerprints.
  - The stereo camera has become misaligned due to a strong impact.
• When there is a malfunction in the EyeSight system, turn off the Pre-Collision Braking System (⇒ refer to page 39) and the Lane Departure Warning (⇒ refer to page 84), and stop using the Adaptive Cruise Control, Lane Keep Assist and Conventional Cruise Control. Contact a SUBARU dealer and have the system inspected.

• When the Vehicle Dynamics Control warning light is illuminated, the Pre-Collision Braking System may not operate properly. If the indicator light is illuminated, turn off the Pre-Collision Braking System. Also, do not use the Adaptive Cruise Control or Conventional Cruise Control.

---

**NOTE**

EyeSight records and stores the following data when the Pre-Collision Braking System is operated. It does not record conversations or other audio data.

- Stereo camera image data
- Distance from the vehicle in front
- Vehicle speed
- Steering wheel turning angle
- Lateral movement with regards to the direction of travel
- Accelerator pedal operation status
- Brake pedal operation status
- Select lever position
- Odometer reading
- Data related to ABS, Vehicle Dynamics Control and Traction Control Function

SUBARU and third parties contracted by SUBARU may acquire and use the recorded data for the purpose of vehicle research and development. SUBARU and third parties contracted by SUBARU will not disclose or provide the acquired data to any other third party except under the following conditions.

- The vehicle owner has given his/her consent.
- The disclosure/provision is based on a court order or other legally enforceable request.
- Data that has been modified so that the user and vehicle cannot be identified is provided to a research institution for statistical processing or similar purposes.
Handling of the Stereo Camera

The stereo camera is located on the front map lights unit.

CAUTION

• The stereo camera monitors and detects smears or blurs on the front of the camera. However, detection is not 100% accurate. Under certain conditions, the function may fail to detect smears or blurs on the front of the stereo camera accurately. In addition, this function may not detect that there is snow or ice on the windshield close to the stereo camera. In such conditions, be sure to keep the windshield clean at all times (indicated by ). Otherwise the system may not operate correctly. When this function detects that the front of the stereo camera is smeared or blurred, no EyeSight functions can be activated except for Conventional Cruise Control.

• The stereo camera lenses are precision components. Always observe the following precautions especially when handling them.
  - Never touch the stereo camera lenses, and do not attempt to wipe or clean the lenses. Doing so could damage or soil the lens, and lead to improper system performance.

If you ever touch a lens for any reason, be sure to contact a SUBARU dealer.
- When cleaning the windshield, cover the front of the camera casing with paper that does not collect dust, such as copy paper. Affix the paper to prevent glass cleaner from getting on the camera lenses. At this point, make sure that the tape’s adhesive surface does not come in contact with the windshield or the lens. Be sure to remove the paper after cleaning.
- When having the inside of windshield cleaned at a service station, etc., be sure to request that the attendant covers the camera covers before washing the vehicle.
- Do not subject the stereo camera to a strong impact.
- Do not remove or disassemble the stereo camera.
- Do not change the positions where the stereo camera is installed or modify any of the surrounding structures.

- Do not install an interior rearview mirror other than a genuine SUBARU rearview mirror (such as a wide-type mirror) and the sun visor. Also, use the rearview mirror so that it does not obstruct the stereo camera. Failure to do so may affect the stereo camera’s field of view and could prevent the EyeSight system from functioning properly.
• Do not install any accessories other than the ones designated by SUBARU on the prohibited areas shown in the illustrations (gray zones). Even if some accessories are installed on the outside of the prohibited areas, abnormal operation of EyeSight may occur due to the reflection of the light or any objects. In this situation, move the accessories. For details, contact a SUBARU dealer.

Side view

Front view

• Do not place any objects on top of the instrument panel. The stereo camera may not be able to detect objects accurately and the EyeSight system may not function properly due to reflections in the windshield. For details, contact a SUBARU dealer.

• If the top of the instrument panel is polished with chemicals or other substances, the stereo camera may not be able to detect objects accurately and the EyeSight system may not operate properly due to reflections in the windshield.

• Do not install any wiper blades other than genuine SUBARU wiper blades. Doing so may affect the stereo camera’s field of view and could prevent the EyeSight system from functioning properly.

• Replace damaged wiper blades or worn wiper blade rubbers as soon as possible. Using damaged wiper blades or worn wiper blade rubbers may cause streaking on the windshield. The stereo camera may not be able to detect objects accurately and the EyeSight system may not function properly due to streaks or droplets remaining on the windshield.
• Do not install any accessories on the front side such as on the hood or the grille. It may affect the camera view and the system may not operate correctly.
• Make sure that the cargo loaded on the roof does not interfere in the stereo camera’s field of view. Obstructing the stereo camera’s view may impair the system operation. For details, contact a SUBARU dealer.
• Keep the windshield (outside and inside) clean at all times. When the windshield has become fogged, or it has a dirt or an oil film on it, the stereo camera may not detect objects accurately and the EyeSight system may not operate correctly. Never mount any device to the center air vent, as any airflow change may impact performance of the EyeSight system.
• Do not place any stickers or accessories on the windshield (outside or inside). If you have to do so (for example, legally required or electronic toll tag), avoid the area directly in front of the camera. Otherwise, it may adversely affect the field of view of the stereo camera and can cause improper operation of the system. For details, contact a SUBARU dealer.
• Do not use any glass coating agents or similar substances on the windshield. Doing so may interfere with the proper operation of the system.
• Do not install any film or an additional layer of glass on the windshield. The system may not operate correctly.
• If there are scratches or cracks on the windshield, contact a SUBARU dealer.
• To have the windshield replaced or repaired, contact a SUBARU dealer. Do not install a windshield other than a genuine SUBARU windshield. The stereo camera may not be able to detect objects accurately and the EyeSight system may not operate properly.
EyeSight Functions

EyeSight includes the following functions.

■ Pre-Collision Braking System
This function uses a following distance warning feature to warn the driver to take evasive action when there is the possibility of a collision with a vehicle or obstacle in front of you. If the driver does not take evasive action, the brakes are applied automatically to help reduce vehicle collision damage or, if possible, help prevent a collision.
⇒ Refer to page 27.

■ Adaptive Cruise Control
This function maintains the set vehicle speed and when there is a vehicle in front in the same traffic lane, it follows the speed of the vehicle in front up to the maximum of the set vehicle speed.
⇒ Refer to page 41.

■ Lane Keep Assist (models with Lane Keep Assist)
This function helps suppress lane drifting by detecting lane markings (e.g., white lines) on highways and roads, and by assisting steering operation.
⇒ Refer to page 66.

■ Pre-Collision Throttle Management
This function reduces accidental forward movement caused by the select lever being placed in the wrong position or the accelerator pedal being accidentally depressed, or depressed too strongly.
⇒ Refer to page 76.

■ Lane Departure Warning
This function warns the driver when the vehicle is about to drift off the road.
⇒ Refer to page 82.
■ Lane Sway Warning

This function warns the driver when it detects vehicle drifting caused by driver fatigue, failure to concentrate on the road, inattention, strong crosswinds or other factors.
⇒ Refer to page 85.

■ Lead Vehicle Start Alert

This function notifies the driver when the vehicle stopped in front starts moving but the driver’s vehicle remains stationary.
⇒ Refer to page 88.

■ Conventional Cruise Control

In this mode, the system maintains a constant vehicle speed. It does not follow the vehicle in front. This function can be used even when the stereo camera has temporarily stopped operating (⇒ refer to page 107). This function is used by switching from Adaptive Cruise Control to Conventional Cruise Control.
⇒ Refer to page 90.

NOTE
EyeSight does not operate when the engine is not running (unless the engine is automatically stopped by the Auto Start Stop system).
About EyeSight

Instrument panel display layout

Display units can be changed in the Screen Settings. For details, refer to the Owner’s Manual for your vehicle.

(1) EyeSight display area
(2) Adaptive Cruise Control indicator
(3) Conventional Cruise Control indicator
(4) READY indicator
(5) Auto Start Stop indicator (green)/Auto Start Stop OFF indicator (yellow)/Auto Start Stop warning indicator (yellow)
(6) Auto Start Stop No Activity Detected indicator light (white)
(7) Select lever/gear position indicator
(8) X-MODE indicator
(9) Set vehicle speed display
(10) Your vehicle indicator
(11) Lane indicator (models with Lane Keep Assist)
(12) Lane Keep Assist indicator (models with Lane Keep Assist)
(13) Following distance setting indicator
(14) Lead vehicle indicator
(15) Warning screen area
(16) EyeSight temporary stop indicator (white)

(21) Brake system warning light
■ CRUISE indicator

- These indicators illuminate when the main cruise control is on.
  - \( \mathcal{A} \): Adaptive Cruise Control (Adaptive Cruise Control indicator)
  - \( \mathcal{S} \): Conventional Cruise Control (Conventional Cruise Control indicator)
  ⇒ Refer to pages 48 and 92.
- When cruise control* is activated, this indicator (white) turns green. When the driver accelerates the vehicle by depressing the acceleration pedal while the Adaptive Cruise Control is operating, the indicator turns white.
  ⇒ Refer to pages 49 and 94.
*: Adaptive Cruise Control and Conventional Cruise Control

■ READY indicator

\( \mathcal{R} \) illuminates when cruise control* can be activated.
⇒ Refer to pages 48 and 93.
*: Adaptive Cruise Control and Conventional Cruise Control

■ Lead vehicle indicator

When Adaptive Cruise Control is activated or when the vehicle is stopped, this indicator illuminates when a vehicle in front has been detected.
⇒ Refer to page 50.

■ Following distance setting indicator

Indicates the following distance setting that was set with the \( \mathcal{A} / \mathcal{F} \) (Following distance setting) switch.
⇒ Refer to page 57.

■ Set vehicle speed display

Displays the set vehicle speed.
⇒ Refer to pages 49 and 94.

■ Select lever/gear position indicator

This indicator illuminates and shows which position the select lever or the gear is in.
About EyeSight

■ EyeSight warning indicator (yellow)
  • This indicator illuminates or flashes when a malfunction occurs in the EyeSight system.
  • When it is illuminated or flashing, none of the EyeSight functions can be used (including Adaptive Cruise Control and the Pre-Collision Braking System, etc.).
    ⇒ Refer to page 105.

■ EyeSight temporary stop indicator (white)
  • This indicator illuminates when the EyeSight system is temporarily stopped.
  • When the ignition switch is placed in the ON position, it will illuminate if the (CRUISE) switch or the (Lane Keep Assist) switch is set to ON within approximately 7 seconds of the engine starting. It turns off when approximately 7 seconds have elapsed since the engine started.
  • When it is illuminated, none of the EyeSight functions can be used except for Conventional Cruise Control.
    ⇒ Refer to page 107.

■ X-MODE indicator
  🏡 (X-MODE indicator) illuminates when the X-MODE is on.
    ⇒ Refer to the vehicle Owner’s Manual for details.

■ Lane Departure Warning OFF indicator light
  • This indicator light illuminates when the Lane Departure Warning and Lane Sway Warning are off.
  • It also illuminates when the ignition switch is turned to the ON position. Approximately 7 seconds after the engine starts, the Lane Departure Warning OFF indicator light will turn off or remain illuminated depending on the current status (ON or OFF).
    ⇒ Refer to page 84.

■ Pre-Collision Braking System OFF indicator light
  • This indicator light illuminates when the Pre-Collision Braking System and Pre-Collision Throttle Management are off.
  • It also illuminates when the ignition switch is turned to the ON position, and then turns off approximately 7 seconds after the engine starts.
    ⇒ Refer to page 40.
■ Lane indicator (models with Lane Keep Assist)
This indicator illuminates in gray when the Lane Keep Assist switch is pressed. When the Lane Keep Assist is operational or operating, this indicator illuminates in white.
⇒ Refer to page 71.

■ Auto Start Stop indicator (green) (also used both as Auto Start Stop warning indicator (yellow) and Auto Start Stop OFF indicator (yellow))
- This indicator illuminates in yellow when the ignition switch is turned to the ON position, and then it turns off after the engine starts.
- It illuminates in green while the Auto Start Stop system operates. It turns off after the engine restarts.
- It flashes in yellow if a malfunction occurs in the Auto Start Stop system.

■ Auto Start Stop No Activity Detected indicator light
When a vehicle is stopped, the indicator light illuminates when the operating conditions of the Auto Start Stop system are not met. The light will turn off when the vehicle starts driving.

■ Brake system warning light
The brake system warning light illuminates when:
- There is a malfunction in the brake system.
- The parking lever is pulled up.
- The brake fluid level is low.
The EyeSight system will not operate when the brake system warning light is on due to the parking brake lever being pulled up or a malfunction in the brake system. It may operate when the brake system warning light is on due to a low brake fluid level, however there may be insufficient braking force.
If the brake system warning light does not turn off, immediately pull the vehicle over in a safe place and contact a SUBARU dealer to have the system inspected.
⇒ Refer to the vehicle Owner’s Manual for details.

■ Your vehicle indicator
When the brake pedal is depressed or the brake control function is activated, the brake indicator light illuminates in red.
About EyeSight

■ Lane Keep Assist indicator (models with Lane Keep Assist)
  • This indicator illuminates when Lane Keep Assist is turned on by pressing the \( \text{Lane Keep Assist} \) switch.
  • While the Lane Keep Assist system is activated, if the vehicle travels across a lane marker, the indicator turns from white to green.
  \( \Rightarrow \) Refer to page 71.

■ Vehicle Dynamics Control warning light

This warning light illuminates when the ignition switch is turned to the ON position, and turns off approximately 2 seconds after the engine is started. It will illuminate if there is a malfunction in the Vehicle Dynamics Control electrical control system.

\( \Rightarrow \) Refer to the vehicle Owner’s Manual for details.

About EyeSight

■ (CRUISE) switch

- Press this switch to turn cruise control* on/off.
- When the (CRUISE) switch is pressed, (Adaptive Cruise Control indicator) appears on the EyeSight display area of the combination meter display, and then (Conventional Cruise Control indicator) appears by pressing and holding the / (Following distance setting) switch for approximately 2 seconds. When (Adaptive Cruise Control indicator) or (Conventional Cruise Control indicator) is shown on the EyeSight display area, this indicates that the main cruise control is on. 
  ⇒ Refer to pages 48 and 92.
- Press this switch to cancel the cruise control.
  ⇒ Refer to pages 58 and 98.
  *: Adaptive Cruise Control and Conventional Cruise Control

■ RES/SET switch

● SET/-
  - Press this switch to set cruise control*.
  - Press this switch to reduce the set vehicle speed (when cruise control* is currently set).
  ⇒ Refer to pages 49 and 55 (for Adaptive Cruise Control).
  ⇒ Refer to pages 94 and 97 (for Conventional Cruise Control).
  *: Adaptive Cruise Control and Conventional Cruise Control

● RES/+ 
  - Press this switch to set cruise control*.
  - After cruise control* is canceled, press this switch to resume the cruise control function at the vehicle speed that was previously set.
  - Press this switch to increase set vehicle speed (when cruise control* is currently set).
  ⇒ Refer to pages 49, 53 and 63 (for Adaptive Cruise Control).
  ⇒ Refer to pages 94, 96 and 102 (for Conventional Cruise Control).
  *: Adaptive Cruise Control and Conventional Cruise Control

■ CANCEL switch (models without Lane Keep Assist)

Press this switch to cancel cruise control*.
  *: Adaptive Cruise Control and Conventional Cruise Control
  ⇒ Refer to pages 58 and 98.
■ (Following distance setting) switches
  - Press either of these switches to select the set following distance in 4 stages: (only when Adaptive Cruise Control is on).
    ⇒ Refer to page 57.
  - When the (CRUISE) switch is on, switching between Adaptive Cruise Control and Conventional Cruise Control is possible by pressing the (Following distance setting) switch*.
    *: To switch to Conventional Cruise Control, press and hold the switch for approximately 2 seconds or longer.

■ (Lane Keep Assist) switch (models with Lane Keep Assist)
  Press this switch to turn Lane Keep Assist on/off.
  ⇒ Refer to page 71.

■ switch/ switch
  Pull either of these switches in the following situations.
  - When switching the screen displayed on the combination meter display.
  - When changing the Warning Volume settings, etc.
    ⇒ Refer to page 109.

■ (Info)/SET switch
  Pull this switch in the following situations.
  - When displaying the message that appeared in the warning screen area again.
    ⇒ Refer to page 111.
  - When changing the Warning Volume settings, etc.
    ⇒ Refer to page 109.
About EyeSight

■ 🛑 (Pre-Collision Braking System OFF) switch

Press and hold this switch for approximately 2 seconds or longer to turn off the Pre-Collision Braking System and Pre-Collision Throttle Management.
When these functions are off, the Pre-Collision Braking System OFF indicator light on the instrument panel illuminates.
Press and hold the switch again to turn on the Pre-Collision Braking System and Pre-Collision Throttle Management. This turns off the Pre-Collision Braking System OFF indicator light.
⇒ Refer to pages 39 and 81.

■ 🚊 (Lane Departure Warning OFF) switch

Press and hold this switch for approximately 2 seconds or longer to turn off the Lane Departure Warning and Lane Sway Warning functions.
When these functions are off, the Lane Departure Warning OFF indicator light on the instrument panel illuminates.
Press and hold the switch again to turn on the Lane Departure Warning and Lane Sway Warning functions. This turns off the Lane Departure Warning OFF indicator light.
⇒ Refer to pages 84 and 87.

■ X-MODE switch

Press this switch to turn the X-MODE on/off.
When the X-MODE is activated, 🚗 (X-MODE indicator) illuminates.
When the X-MODE is deactivated, 🚗 (X-MODE indicator) will turn off.
⇒ Refer to the vehicle Owner's Manual for details.
About EyeSight

**Multi-function display**

1. Lane Departure/Sway Warning indicator
2. Pre-Collision Braking System indicator
3. Lead vehicle indicator
4. Lane indicator (models with Lane Keep Assist)
5. Road line indicator (models with Lane Keep Assist)
6. Your own vehicle indicator

**Lane Departure/Sway Warning indicator**
This indicator illuminates when the Lane Departure Warning and Lane Sway Warning are on.

**Pre-Collision Braking System indicator**
This indicator illuminates when the Pre-Collision Braking System is on.

**Lead vehicle indicator**
When the Adaptive Cruise Control is on and a vehicle is in front of you, the lead vehicle indicator is displayed. The lead vehicle indicator displays an image of the distance between your vehicle and the vehicle in front of you.
About EyeSight

- **Lane indicator (models with Lane Keep Assist)**
  This indicator is displayed when the Lane Keep Assist is active.

- **Road line indicator (models with Lane Keep Assist)**
  This indicator illuminates when the Lane Keep Assist is operational or operating.

- **Your own vehicle indicator**
  When the brake pedal is depressed or the brake control function is activated, the brake light on the vehicle indicator illuminates in red.
Pre-Collision Braking System

When there is the risk of a rear-end collision with an obstacle in front, the EyeSight system helps to prevent or minimize a collision by warning the driver. If the driver still does not take evasive action to avoid a collision, the brakes can be automatically applied just before the collision in order to reduce impact damage, or if possible, prevent the collision. If the driver takes evasive action to avoid a collision, Pre-Collision Braking Assist will operate in order to help the driver to prevent or minimize the collision.

This system can be effective not only with direct rear-end collisions, but also with offset rear-end collisions. This function can be activated when the select lever is in the D, M (models with manual mode), L (models with L position) or N position.

**WARNING**

- Never use the Pre-Collision Braking System and Pre-Collision Braking Assist to stop your car or avoid a collision under ordinary conditions. These functions cannot prevent collisions under all conditions. If the driver relies only on the Pre-Collision Braking System for brake operation, collisions may occur.

- When a warning is activated, pay attention to the front of the vehicle and its surroundings, and operate the brake pedal and/or take other actions if necessary.

- The EyeSight Pre-Collision Braking System is primarily designed to prevent rear-end collisions with other vehicles when possible or to minimize damage and injuries in the event of a collision. In addition to other vehicles, things such as motorbikes, bicycles and pedestrians can also be treated as obstacles. However, there may be cases when detection is not possible depending on a variety of conditions. For example, when a vehicle is viewed from the side, oncoming vehicle, vehicles approaching in reverse, small animals or children, or walls or doors are not likely to be detected.

- The Pre-Collision Braking System will operate at the point when it determines that a collision cannot be avoided and is designed to apply strong braking force just before a collision. The result of this varies depending on a variety of conditions. Because of this, performance of this function will not always be the same.

- When the Pre-Collision Braking System is activated, it will continue to operate even if the accelerator pedal is partially depressed. However, it will be canceled if the accelerator pedal is suddenly or fully depressed.

- If the driver depresses the brake pedal or turns the steering wheel, the system may determine that this constitutes evasive action by the driver, and the automatic braking control may not activate in order to allow the driver full control.

Continued on next page ⇒
When the difference in speed with the obstacle in front is the following figure\(^1\) or more, it may not be possible to avoid a collision. Even if the speed difference is the following figure\(^1\) or less, in cases such as when another vehicle cuts in front of you, or in other cases depending on visibility, the condition of road surface and other factors\(^2\), the function may be unable to stop the vehicle or may not activate. Pre-Collision Braking Assist also may not activate depending on the conditions\(^2\) listed below.

*1: For vehicles: approximately 30 mph (50 km/h),
For pedestrians: approximately 21 mph (35 km/h)

*2: Conditions in which the Pre-Collision Braking System cannot detect obstacles:
- Distance to obstacle in front of you, speed difference, proximity conditions, lateral displacement (the amount of offset)
- Vehicle conditions (amount of load, number of occupants, etc.)
- Road conditions (grade, slipperiness, shape, bumps, etc.)
- Visibility ahead is poor (rain, snow, fog or smoke, etc.).
- The detected object is something other than a vehicle, motorcycle, bicycle or pedestrian.
  - A domestic animal or other animal (a dog or deer, etc.)
  - A guardrail, telephone pole, tree, fence or wall, etc.
- Even if the obstacle is a motorcycle, bicycle or pedestrian, depending on the brightness of the surroundings as well as the relative movement, and aspect or angle of the object, there may be cases when the system cannot detect it.
- The system determines that operation by the driver (based on accelerator pedal operation, braking, steering wheel angle, etc.) is intended as evasive action.
- Vehicle maintenance status (brake systems, tire wear, tire pressure, whether a temporary spare tire is being used, etc.)
- A trailer or another vehicle, etc. is being towed.
- The brakes are cold due to the outside temperature being low or just after starting the engine.
- The brakes are overheated on downhill grades (braking performance is reduced).
- In rain or after washing the vehicle (the brakes are wet and braking performance is reduced)
- Recognition conditions of the stereo camera
  In particular, the function may be unable to stop the vehicle or may not activate in the following cases.
  - Bad weather (for example heavy rain, a blizzard or thick fog)
  - Visibility is poor due to sand, smoke or water vapor blowing in the wind, or the front vision is obscured due to water splashes, snow, dirt or dust stirred up generated by the vehicle in front or oncoming traffic.
  - At night or in a tunnel without the headlights on
  - At night or in a tunnel when there is a vehicle in front that does not have its taillights on
  - Approaching a motorcycle, bicycle or pedestrian at night
  - Ambient light is poor in the evening or early morning.
  - A vehicle, motorcycle, bicycle or pedestrian is outside the area illuminated by the headlights.
  - Strong light is coming from the front (for example, sunlight at dawn, sunset or headlight beams, etc.).
  - The windshield has become fogged, scratched, or snow, dirt or frost has adhered to it, or it is otherwise affected.
  - Fluid has not been fully wiped off the windshield during or after washer use.
  - The target cannot be correctly recognized because the stereo camera’s view is obstructed by water droplets from rain or the window washer, or by the wiper blades.
  - The stereo camera’s field of view is obstructed (for example by a canoe on the roof of the vehicle).
  - The rear aspect of the vehicle in front is low, small or irregular (the system may recognize another part of the vehicle as its rear and will determine operation from that).
    - There is an empty truck or trailer with no rear and/or side panels on the cargo bed.
    - With vehicles that have cargo protruding from their back ends
    - With non-standard shaped vehicles (vehicle transporters or vehicles with a sidecar fitted, etc.)
    - The height of the vehicle is low, etc.
Pre-Collision Braking System

Continued from previous page

- There is a wall, etc. in front of a stopped vehicle.
- There is another object near the vehicle.
- A vehicle, etc. has its side facing you.
- With vehicles that are backing up or with oncoming vehicles, etc.
- The size and height of an obstacle is smaller than the limitations of the stereo camera’s recognition capability.
  - With small animals or children, etc.
  - With pedestrians who are sitting or lying down
- The detected object is a fence or wall, etc. with a uniform pattern (a striped pattern or brick pattern, etc.).
- There is a wall or door made of glass or a mirror in front.
- The vehicle in front suddenly swerves, accelerates, or decelerates.
- A vehicle, motorcycle, bicycle or pedestrian suddenly cuts in from the side or suddenly runs in front of you.
- Your vehicle is immediately behind an obstacle after changing lanes.
- There is a vehicle, motorcycle, bicycle or pedestrian in a location close to your vehicle’s bumper.
- The speed difference between your vehicle and an obstacle is 4 mph (5 km/h) or less (As braking is performed once the obstacle is in close proximity to your vehicle, depending on the shape and size of the obstacle, there may be some cases when the obstacle is outside the range of the camera’s field of view.).
- On sharp curves, steep uphill grades or steep downhill grades
- On a bumpy or unpaved road
- There are changes in brightness, such as at a tunnel entrance or exit.
- Do not test Pre-Collision Braking System on its own. It may operate improperly and cause an accident.
The system may not operate correctly under the conditions listed below. When these conditions occur, turn off the Pre-Collision Braking System.

- The tire pressure is not correct. *1
- The temporary spare tire is installed. *1
- Tires that are unevenly worn or tires with uneven wear patterns are installed. *1
- Tires that are the wrong size are installed. *1
- A flat tire has been fixed temporarily with a tire repair kit.
- The suspension has been modified (including a genuine SUBARU suspension that has been modified).
- An object that obstructs the stereo camera’s view is installed on the vehicle.
- The headlights are dirty or they have snow and ice or dirt on them. (Objects are not correctly illuminated and are difficult to detect.)
- The optical axes are not aligned correctly. (Objects are not correctly illuminated and are difficult to detect.)
- The lights including headlights and fog lights have been modified.
- Vehicle operation has become unstable due to an accident or malfunction.
- The brake system warning light is illuminated in red. *2
- A heavy cargo is loaded onto or inside the vehicle.
- The maximum number of occupants is exceeded.
- The combination meter is not operating properly; such as when the lights do not illuminate, the beeps do not sound, the display is different from when it is normal, etc. *3

*1: The wheels and tires have functions that are critically important. Be sure to use the correct ones. For details, refer to the Owner’s Manual for your vehicle.

*2: If the brake system warning light does not turn off, immediately pull the vehicle over in a safe place and contact a SUBARU dealer to have the system inspected. For details, refer to the Owner’s Manual for your vehicle.

*3: For details about the combination meter, refer to the Owner’s Manual for your vehicle.
Pre-Collision Braking System

**CAUTION**

- In the following situations, turn off the Pre-Collision Braking System. Otherwise the Pre-Collision Braking System may activate unexpectedly.
  - The vehicle is being towed.
  - The vehicle is being loaded onto a carrier.
  - A chassis dynamometer, free-rollers or similar equipment is being used.
  - A mechanic lifts up the vehicle, starts the engine and spins the wheels freely.
  - Passing hanging banners, flags or branches
  - Thick/tall vegetation is touching the vehicle.
  - Driving on a race track
  - In a drive-through car wash

- The Pre-Collision Braking System may activate in the following situations. Therefore concentrate on safe driving.
  - Passing through an automatic gate (opening and shutting)
  - Driving close to the vehicle in front
  - Driving in a location where the grade of the road changes rapidly
- Visibility is poor due to sand, smoke or water vapor blowing in the wind, or the front vision is obscured due to water splashes, snow, dirt or dust stirred up generated by the vehicle in front or oncoming traffic.
- Passing through clouds of steam or smoke, etc.
- In adverse weather, such as heavy snow or snowstorms.
- The exhaust gas emitted by the vehicle in front is clearly visible in cold weather, etc.

- There is an obstacle on a curve or intersection.
- A vehicle or an object is being narrowly passed.
- Stopping very close to a wall or a vehicle in front.
- Passing through water spray from road sprinklers or snow clearing sprinklers on the road.
• If there is cargo or installed accessories, etc. that are protruding beyond the edge of the front bumper, the vehicle’s length will increase and the system may not be able to prevent a collision.
• If the driver operates the brake pedal during automatic braking, the pedal may feel stiff; however, this is normal. By depressing the brake pedal further you can apply more braking force.

**NOTE**

Some unusual noises may be audible during automatic braking. This is caused by the braking control and is normal.
Detection of pedestrians

The EyeSight system can also detect pedestrians. The EyeSight system detects pedestrians from their size, shape, and movement. The system detects a pedestrian when the contour of the head and shoulders are clear.

WARNING

The EyeSight system’s Pre-Collision Braking function also identifies pedestrians as obstacles. However, depending on the conditions, there may be cases when the system cannot detect a pedestrian. In the following conditions, the possibility that the system may not be able to detect a pedestrian as an object is particularly high.

- Pedestrians are walking in a group.
- A pedestrian is next to a wall or other obstacle.
- A pedestrian is using an umbrella.
- A pedestrian is wearing clothes that are a similar color to the surrounding environment.
- A pedestrian is carrying bulky luggage.
- A pedestrian is bent over, crouching down or lying down.
- A pedestrian is in a dark location.
- A pedestrian suddenly crosses in front of you from the side or suddenly runs in front of you.

The system detects pedestrians when the contour of the head and shoulders are clear. Based on these conditions, the system may not be able to detect pedestrians as objects.
Pre-Collision Braking System

Pre-Collision Braking System operation

When there is an obstacle in front of you during driving, the system activates in the following sequence in order to warn the driver and to activate braking control and the brake lights.

**Following Distance Warning:**
When the system determines that there is a risk of collision, a buzzer sounds repeated short beeps and the indicators on the combination meter display illuminate to warn the driver. The Following Distance Warning operates when Adaptive Cruise Control is not activated. When the driver depresses the brake pedal to decelerate and achieves a suitable following distance, the warning is canceled.

**First Braking and Warning:**
When the system determines that there is a high risk of collision with an obstacle in front, a buzzer sounds repeated short beeps and the indicators on the combination meter display illuminate to warn the driver. Braking control may be activated and in some situations, engine output may also be controlled. If the system determines that the amount of evasive action (braking, steering, etc.) taken by the driver has reduced the risk of collision, braking activation is canceled.

**Secondary Braking and Warning:**
If the system then determines that the risk of collision is extremely high, the buzzer changes to a continuous beeping sound and stronger braking control is activated. Despite any evasive action taken by the driver, if the system subsequently determines that a collision is unavoidable, braking and engine output are controlled by the system. Once the vehicle has come to a stop, the system will release the brake pedal control. At this time you will need to manually apply the brake.

**Vehicle restart:**
When the vehicle is completely stopped by the automatic braking system, a short tone “3 short beeps and 1 long beep” will sound and braking will be gradually released and the vehicle will start creeping. To stop the vehicle completely, depress the brake pedal after the vehicle has stopped.
NOTE

- Neither first braking nor secondary braking will operate in the following cases.
  - The vehicle speed is approximately 1 mph (1 km/h) or less. (When the select lever is in the N position and your vehicle speed is approximately 2 mph (4 km/h) or less) or 100 mph (160 km/h)* or more.
  - Vehicle Dynamics Control is active.
- If the system detects the brake lights of the vehicle in front, your vehicle will start decelerating earlier than if it does not.
- There are some cases where the first braking is applied for a longer period of time. One of the reasons for this is due to a large speed difference with an obstacle in front. In those cases, stronger or weaker braking control may be activated.

- For Mexico and Colombia models, 200 km/h.
Pre-Collision Braking System

Pre-Collision Braking Assist operation

When the Pre-Collision Braking System is activated (when the system determines that there is a high risk of collision with an obstacle in front), if the driver depresses the brake pedal, the system determines that this is emergency braking and activates braking assist automatically.

⚠️ CAUTION

If the driver depresses the brake pedal while following distance warning is activated, the Pre-Collision Braking Assist will not work. The vehicle decelerates with the normal braking force operated by the driver.

⚠️ NOTE

- Pre-Collision Braking Assist function does not operate when the vehicle speed is approximately 7 mph (10 km/h) or less or 100 mph (160 km/h)* or more.
  *: For Mexico and Colombia models, 200 km/h.
- For information about the brake assist function, refer to the Owner’s Manual for your vehicle.
Turning off the Pre-Collision Braking System

Press and hold the Pre-Collision Braking System OFF switch for approximately 2 seconds or longer to turn off the Pre-Collision Braking System (including Pre-Collision Braking Assist). When 1 short beep sound emits, this control is turned off and the Pre-Collision Braking System OFF indicator light on the instrument panel illuminates. To turn the control back on, press and hold the Pre-Collision Braking System OFF switch for approximately 2 seconds or longer again. When this control is turned on, the Pre-Collision Braking System OFF indicator light turns off.

NOTE

- When the Pre-Collision Braking System is turned off, the Pre-Collision Throttle Management Control function is also turned off.
- Even when the Pre-Collision Braking System is turned off, if the engine is turned off and then restarted, the Pre-Collision Braking System will be turned on. The system default setting when the vehicle is restarted is on.
Pre-Collision Braking System

■ Pre-Collision Braking System OFF indicator light

This indicator light illuminates when the ignition switch is turned to the ON position, and remains illuminated for approximately 7 seconds after the engine starts. It turns on when the Pre-Collision Braking System is turned off. It also illuminates under the following conditions.

- The EyeSight system has a malfunction.
  ⇒ Refer to page 105.
- The EyeSight system has stopped temporarily.
  ⇒ Refer to page 107.

NOTE

When the Pre-Collision Braking System OFF indicator light is turned on, the Pre-Collision Braking System (including the Pre-Collision Braking Assist function) does not operate.
Adaptive Cruise Control

Adaptive Cruise Control is a driving support system intended to allow more comfortable driving on expressways, freeways and interstate highways. The stereo camera detects vehicles in front that are driving in the same traffic lane, and your vehicle follows the vehicle in front (up to the maximum speed of the set vehicle speed). While following, your vehicle will automatically maintain a following distance that corresponds to the speed of the vehicle in front. The vehicle is capable of being controlled at a speed between 0 mph (0 km/h) and approximately 90 mph (145 km/h)*. Please remember that you should not exceed posted speed limits.

*: For Mexico and Colombia models, 0 km/h and approximately 180 km/h.

**WARNING**

- This system does not provide the driver with an automatic driving function that handles all traffic conditions.
- Do not rely excessively on Adaptive Cruise Control. This system is not intended to assist in driving when the driver is not paying full attention to what is ahead of him/her due to distractions or a lack of concentration while driving, or under conditions of poor visibility. It is not intended to prevent rear-end collisions.
- Strive for safe driving at all times. Always maintain a safe following distance behind the vehicle in front of you, pay attention to your surroundings and the driving conditions, and operate the brake pedal and take other actions as necessary.
- When using Adaptive Cruise Control, always set the speed according to the speed limit, traffic flow, road conditions, and other conditions.
- Before using the system, perform a daily inspection and verify that there are no malfunctions of the tires or brakes.
  ⇒ Refer to “Warranty and Maintenance Booklet”.
- The system may not operate correctly under the conditions listed below. When these conditions occur, do not use Adaptive Cruise Control.
  - The tire pressure is not correct.*1
  - The temporary spare tire is installed.*1
  - Tires that are unevenly worn or tires with uneven wear patterns are installed.*1
  - Tires that are the wrong size are installed.*1
  - A flat tire has been fixed temporarily with a tire repair kit.
  - The suspension has been modified (including a genuine SUBARU suspension that has been modified).
  - An object that obstructs the stereo camera’s view is installed on the vehicle.
  - The headlights are dirty or they have snow and ice or dirt on them. (Objects are not correctly illuminated and are difficult to detect.)

Continued on next page ⇒
Adaptive Cruise Control

Continued from previous page

- The optical axes are not aligned correctly. (Objects are not correctly illuminated and are difficult to detect.)
- The lights including headlights and fog lights have been modified.
- Vehicle operation has become unstable due to an accident or malfunction.
- The brake system warning light is illuminated in red.\(^2\)
- A heavy cargo is loaded onto or inside the vehicle.
- The maximum number of occupants is exceeded.
- A trailer or another vehicle, etc. is being towed.
- The combination meter is not operating properly; such as when the lights do not illuminate, the beeps do not sound, the display is different from when it is normal, etc.\(^3\)

\(^1\): The wheels and tires have functions that are critically important. Be sure to use the correct ones. For details, refer to the Owner’s Manual for your vehicle.

\(^2\): If the brake system warning light does not turn off, immediately pull the vehicle over in a safe place and contact a SUBARU dealer to have the system inspected. For details, refer to the Owner’s Manual for your vehicle.

\(^3\): For details about the combination meter, refer to the Owner’s Manual for your vehicle.

- Adaptive Cruise Control is designed for use on expressways, freeways, toll roads, interstate highways and similar limited access roads. It is not intended to be used in city traffic. In the following conditions, do not use Adaptive Cruise Control. Doing so may result in an accident.
- Ordinary roads (roads other than those mentioned above)
  Depending on the driving environment (complexity of roads and other factors), the system may not be able to perform as the traffic conditions require, and that may result in an accident.
- Sharp corners or winding roads
- Frozen roads, snow-covered roads or other slippery road surfaces
  The tires may spin, causing loss of control of the vehicle.
- Traffic conditions when frequent acceleration and deceleration make it difficult to maintain the following distance
  It may not be possible for the system to perform as the traffic conditions require.
- Steep downhill grades
  The set vehicle speed may be exceeded.
- On a steep continuous downhill grade
  The brakes may overheat.
- Roads and overpasses with repeated steep uphill and downhill grades. Detection of the vehicle in front may be lost, or the road surface may be detected instead of the vehicle in front, making correct control impossible.
- Entering a sharp corner/turn into an interchange or junction, or a service area, parking area, toll booth or other facilities. Detection of the vehicle in front may not be possible.
- There are changes in brightness, such as at a tunnel entrance or exit.
- Visibility is poor due to sand, smoke or water vapor blowing in the wind, or the front vision is obscured due to water splashes, snow, dirt, water spray from road sprinklers or snow clearing sprinklers on the road, or dust stir up generated by the vehicle in front or oncoming traffic. Detection of the vehicle in front may be lost, or water or other substances may be incorrectly detected instead, making correct control impossible.

- In adverse weather, such as heavy snow or snowstorms.
- The windshield has become fogged, scratched, or snow, dirt, dust or frost has adhered to it, or it is otherwise affected.
Continued from previous page

- Water droplets from rain or the window washer, or dirt has not been fully wiped off the windshield. It may not be possible to detect the vehicle in front, making correct control impossible.
- The stereo camera’s field of view is obstructed (for example by a canoe on the roof of the vehicle).
  - The stereo camera may have difficulty detecting the following objects or conditions. Operate the brake pedal and take other actions as necessary.
  - Vehicles at significantly different speeds (vehicles driving slowly, stopped or oncoming vehicles, etc.)
  - Vehicles cutting into your lane
  - Motorcycles, bicycles, pedestrians and animals, etc.
  - Light is poor in the evening or early morning.
  - At night or in a tunnel without the headlights on
  - At night or in a tunnel when there is a vehicle in front that does not have its taillights on
  - Strong light is coming from the front (sunlight or headlight high beams, etc.).
  - Vehicles in front that have a rear aspect that is low, small or irregular (the system may recognize another part of the vehicle and will determine operation from that)
    • An empty truck or trailer that has no tailgate or longbed
    • With vehicles that have cargo protruding from their back ends
    • With non-standard shaped vehicles (vehicle transporters or vehicles with a sidecar fitted, etc.)
    • Vehicles that are low
- Objects that are located close to the bumper of your vehicle
  - When you do not want to use Adaptive Cruise Control, be sure to turn the \( \text{CRUISE} \) switch off. If the switch is left on, cruise control may be accidentally engaged, possibly resulting in an accident.
  - Before using Adaptive Cruise Control, be sure to fully verify the safety of the vehicle occupants and the area around the vehicle. Never operate the cruise control from outside the vehicle.
Detection of the vehicle in front by the EyeSight stereo camera

- Under the following road conditions or conditions of your vehicle, detection of the vehicle in front may not be possible. Vehicles in neighboring traffic lanes or roadside objects may also be incorrectly detected. Under conditions such as these, do not use Adaptive Cruise Control. If cruise control is currently in use, operate the brake pedal and take other actions as necessary.
  - Following begins from a short following distance, such as when the vehicle in front is a vehicle that cut into your lane.
  - On curved roads, at the start and end of a curve and on roads with continuous curves (These conditions make it difficult for the system to detect vehicles because they are outside the detectable area.)
  - On an on-ramp or off-ramp to a freeway, highway, or other restricted access road (EyeSight Adaptive Cruise Control is not designed for use in this kind of driving environment.)
  - In an urban or suburban environment (Adaptive Cruise Control is not appropriate for use in these driving areas. Use the Adaptive Cruise Control only on limited-access highways.)

Continued on next page ⇒
Adaptive Cruise Control

- The vehicle in front is not directly ahead of your vehicle and is shifted to one side.
- There is an obstacle on the side of the road.
- The relative speed difference compared to the vehicle in front is large.
- A vehicle cuts into your lane in front of you.
- The distance between vehicles is extremely short.
- Your vehicle is drifting within the lane.
- On a bumpy or unpaved road surface
  - On a road with extremely narrow lanes, such as when traffic restrictions are in effect or in areas where construction work is taking place
  - Normal driving has become unstable due to an accident or malfunction.
  - Extremely heavy cargo is loaded in the cargo area or rear seat of your vehicle.
- There are limits to the situation judgment capabilities of the Adaptive Cruise Control system. Deceleration may not take place in time in the following situations. Apply the brake pedal to decelerate the vehicle if necessary.
  - The speed difference with the vehicle in front is too large or the vehicle in front decelerates unexpectedly.
  - The decelerating vehicle in front unexpectedly slows down or suddenly brakes.
- If the buzzer sounds frequently, do not use Adaptive Cruise Control.
Even when the following distance is short, the “Obstacle Detected” warning may not activate in the following situations.
- The difference in speed with the vehicle in front is small. The two vehicles are traveling at almost the same speed.
- The vehicle in front is traveling faster than your vehicle. The following distance is gradually increasing.
- Another vehicle cuts into your lane very close to your vehicle.
- The vehicle in front decelerates suddenly.
* The recognition status of the lead vehicle using the stereo camera can be confirmed by the illumination status of the lead vehicle indicator.
⇒ Refer to page 50.

CAUTION

After Adaptive Cruise Control has started, it maintains control continuously according to the behavior of the vehicle in front. When your vehicle comes to a stop because the vehicle in front has stopped, the automatic braking function will be canceled immediately after stopping and the vehicle will start creeping forward gradually (at the same time three short beeps and a single long beep will sound). Be sure to depress the brake pedal and stop the vehicle completely. Note that the vehicle is not maintained at a standstill position and will not automatically start moving from a standstill position.

Braking may not be sufficient depending on the following conditions. Depress the brake pedal and decelerate as necessary.
- Vehicle conditions (amount of load, number of occupants, etc.)
- Road conditions (grade, slipperiness, shape, bumps, etc.)
- Vehicle maintenance condition (brake systems, tire wear, air pressure, temporary spare tire is being used, etc.)
- The brakes are cold. (For example, just after the engine is started or the outside temperature is low.)
- For a short period of time when driving after the engine is started until the engine has warmed-up
- The brakes are overheated on downhill grades (braking performance may be reduced).
- In rain or after washing the vehicle (the brakes may become wet and braking performance may be reduced.)
How to use Adaptive Cruise Control

Setting Adaptive Cruise Control

(1) Setting Adaptive Cruise Control to standby status
Press the CRUISE switch. At this time, the Adaptive Cruise Control indicator (white), your vehicle indicator and the following distance setting indicator are displayed on the EyeSight display area of the combination meter display.
The set vehicle speed display will read “- - MPH (- - - km/h).”

If the switch is pressed once more, the EyeSight display will turn off. It will also automatically turn off when the engine is stopped.

To set the ready status:
Adaptive Cruise Control can be activated when all of the following conditions are met and READY (READY indicator) is displayed on the EyeSight display area.
- All doors (except the rear gate) are closed.
- The driver’s seatbelt is fastened.
- The select lever is in the D or M (models with manual mode) position.
- The brake pedal is not depressed while driving or the brake pedal is strongly depressed while stopping.
- EyeSight operation is not temporarily stopped. (EyeSight Temporary Stop indicator: White) is turned off.
⇒ Refer to page 107.
- The road is not a steep slope.
Adaptive Cruise Control

- The steering wheel has not been turned significantly in either direction.
- The X-MODE is not turned on (the X-MODE indicator goes off).
- The vehicle speed is between 0 mph (0 km/h) and approximately 90 mph (145 km/h)*.
  *: For Mexico and Colombia models, 0 km/h and approximately 180 km/h.
- Parking brake is released.

(2) Setting Adaptive Cruise Control
Press the RES/SET switch to the “SET/-” side or the “RES/+” side.
Adaptive Cruise Control is activated and control starts, using the vehicle speed at the time when the switch was pressed as the set vehicle speed.
If no vehicle in front has been detected, the vehicle drives at the constant set target speed.

When Adaptive Cruise Control is activated, (READY indicator) turns off, the set vehicle speed is displayed, and (Adaptive Cruise Control indicator) changes from white to green.

WARNING
When using Adaptive Cruise Control, always set the speed according to the speed limit, traffic flow, road conditions, and other conditions.
When a vehicle in front is detected, a buzzer sounds 1 short beep and the lead vehicle indicator will illuminate. The vehicle follows the lead vehicle in front and maintains the selected following distance. At this time, the cruise speed is adjusted to and will not exceed the set speed. If the vehicle in front is no longer detected, a buzzer sounds 1 short beep and the lead vehicle indicator turns off. While the driver accelerates the vehicle by depressing the acceleration pedal, (Adaptive Cruise Control indicator) will turn from green to white. When acceleration has stopped, (Adaptive Cruise Control indicator) will turn from white to green.

NOTE

- The target vehicle speed can be set between 20 mph (30 km/h) and 90 mph (145 km/h)∗.
- For Mexico and Colombia models, 30 km/h and 180 km/h.
- If the vehicle speed is approximately 20 mph (30 km/h) or less when the vehicle speed is set, the set vehicle speed is set to 20 mph (30 km/h).
- When driving on a curve, the vehicle may not accelerate, or may decelerate, even if the set speed is higher than the current vehicle speed.
- If (Adaptive Cruise Control indicator) does not illuminate, even when the (CRUISE) switch is pressed, Adaptive Cruise Control will not operate.
- If (Adaptive Cruise Control indicator) does not illuminate, even when the (CRUISE) switch is pressed and this occurs frequently, there may be a malfunction in the system. Contact a SUBARU dealer and have the system inspected.

NOTE

The buzzer sound (lead vehicle acquisition sound) that occurs when a vehicle in front is detected or no longer detected while Adaptive Cruise Control is activated can be turned off by customization.
⇒ Refer to page 109.
Operation of Adaptive Cruise Control

• When no vehicle in front is detected
  The vehicle drives constantly and correspondingly to the set vehicle speed between 20 mph (30 km/h) and 90 mph (145 km/h)*.
  *: For Mexico and Colombia models, 30 km/h and 180 km/h.

• When a vehicle in front is detected
  The vehicle follows the lead vehicle in front, and will maintain the chosen following distance (there are four settings), up to the set target vehicle speed between 20 mph (30 km/h) and 90 mph (145 km/h)*.
  *: For Mexico and Colombia models, 30 km/h and 180 km/h.

• If your vehicle no longer detects the vehicle in front
  The vehicle gradually accelerates back to the set target vehicle speed and will drive at that constant speed.
  If a vehicle in front is detected while accelerating to the set target vehicle speed, vehicle following will be started again.
If the driver operates the brake pedal during automatic braking, the pedal may feel stiff; however, this is not a malfunction. By depressing the brake pedal further you can apply more braking force. When the brake pedal is released it will return to its original condition.

NOTE

• When the brakes are applied by Adaptive Cruise Control, the vehicle’s brake lights will illuminate.
• Even if there is no lead vehicle present, on a downhill grade, the Adaptive Cruise Control’s automatic brake may operate in order to maintain the set target vehicle speed.
• Some noises may be audible during automatic braking. This is caused by the braking control and does not indicate a malfunction.
• To temporarily accelerate quickly, use the accelerator pedal. After accelerating, the vehicle will gradually return to the set target vehicle speed shown in the set vehicle speed display.
• If the vehicle in front is no longer detected while your vehicle is still controlled by the automatic braking operation, the brake will be automatically released gradually. Depress the accelerator pedal if necessary.
• The lead-vehicle following function has the following characteristics:
  - If the lead vehicle’s brake lights are detected, deceleration will start earlier than without detection.
  - If the vehicle moves to the fast lane while traveling more than 37 mph (60 km/h), the system starts acceleration to the set vehicle speed more quickly because it is linked with the turn signal.
  - If the setting of Driving Lane Customize is different from the actual driving direction, the vehicle may start to accelerate faster than usual when the driver signals a lane change to move from the passing lane to the driving lane.

⇒ Refer to page 110.
Increasing the set vehicle target speed

Using the RES/SET switch

While driving with Adaptive Cruise Control on, operate the RES/SET switch as follows.

- Push to the "RES/+" side briefly.
  Every time the switch is pushed, the set vehicle target speed will increase to the next 5 mph (5 km/h) increment.
- Push to the "RES/+" side continuously.
  While the switch is being pushed, the set vehicle target speed will increase in increments of 1 mph (1 km/h).

When operating the switch, the set vehicle target speed changes on the combination meter display.

Using the accelerator pedal

Depressing the accelerator pedal will increase vehicle speed. Once the preferred speed has been attained, push the RES/SET switch to the "SET/-" side. When the switch is pressed, the new vehicle target speed will be set. The new set vehicle speed will be displayed on the EyeSight display area.
CAUTION

- When Adaptive Cruise Control is operating, the actual vehicle speed is controlled according to the lead vehicle. Therefore, if the RES/SET switch is pressed to the "RES/+" side and set to a speed higher than the speed of the lead vehicle, the vehicle will not accelerate; it will maintain a safe following distance as the first priority. However, because doing so changed the set vehicle target speed, when the lead vehicle is no longer detected (for example, if you change to a freeway lane with no vehicles in front), the vehicle will accelerate to that new set target speed. Change the set vehicle target speed while briefly checking the value shown in the set speed display on the EyeSight display.

- When the accelerator pedal is depressed with Adaptive Cruise Control on, automatic braking control and warnings by Adaptive Cruise Control will not occur. However, if there is a high risk of collision with an obstacle in front of the vehicle at this time, the warning and braking control of the Pre-Collision Braking System may activate.
■ Decreasing the set vehicle target speed

● Using the RES/SET switch
  While driving with Adaptive Cruise Control on, operate the RES/SET switch as follows.
  • Push to the “SET/-” side briefly.
    Every time the switch is pushed, the set vehicle target speed will decrease to the next 5 mph (5 km/h) decrement.
  • Push to the “SET/-” side continuously.
    While the switch is being pushed, the set vehicle target speed will decrease in decrements of 1 mph (1 km/h).
  When operating the switch, the set vehicle target speed changes on the combination meter display.

● Using the brake pedal
  1. Depress the brake pedal to decrease the vehicle speed. Adaptive Cruise Control will be canceled and (Adaptive Cruise Control indicator) changes from green to white.
  2. When the desired speed is reached, press the RES/SET switch to the “SET/-” side. The speed at the time of pressing the switch will be set as the new vehicle speed, and it appears on the EyeSight display area.

■ Accelerating temporarily

Depress the accelerator pedal to accelerate temporarily.
When the accelerator pedal is released, the vehicle returns to the set vehicle speed.
When the driver accelerates the vehicle by depressing the acceleration pedal while the Adaptive Cruise Control is operating, (Adaptive Cruise Control indicator) turns white.
When the acceleration is completed, (Adaptive Cruise Control indicator) returns to green.
Decelerating temporarily

Depress the brake pedal to decelerate temporarily. When the brake pedal is depressed, Adaptive Cruise Control will be canceled. (Adaptive Cruise Control indicator) changes from green to white while the set vehicle target speed remains displayed on the EyeSight display area. Release the brake pedal and press the RES/SET switch to the “RES/+” side to reset the set vehicle target speed.

CAUTION

Ordinarily, while Adaptive Cruise Control is functioning, acceleration and deceleration are performed automatically in accordance with the speed of the lead vehicle (if one is detected). However, when your vehicle approaches a lead vehicle, for example if it is necessary to accelerate for a lane change or other reason, and if the vehicle in front suddenly decelerates, or if another vehicle cuts into your path, operate the accelerator pedal or brake pedal to accelerate or decelerate as appropriate for the existing conditions.
Changing the following distance from the vehicle in front

The following distance from the vehicle in front setting can be changed in 4 stages.

- : When the switch ( side) is pressed, the following distance will be longer.
- : When the switch ( side) is pressed, the following distance will be shorter.

NOTE

The following distance changes corresponding with the vehicle speed. The faster the vehicle travels, the greater the following distance.

Approximate guide to following distances

<table>
<thead>
<tr>
<th>Following distance indicator</th>
<th>When your vehicle speed is 25 mph (40 km/h)</th>
<th>When your vehicle speed is 60 mph (100 km/h)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Approx. 100 ft (30 m)</td>
<td>Approx. 200 ft (60 m)</td>
</tr>
<tr>
<td></td>
<td>Approx. 80 ft (25 m)</td>
<td>Approx. 160 ft (50 m)</td>
</tr>
<tr>
<td></td>
<td>Approx. 65 ft (20 m)</td>
<td>Approx. 130 ft (40 m)</td>
</tr>
<tr>
<td></td>
<td>Approx. 50 ft (15 m)</td>
<td>Approx. 100 ft (30 m)</td>
</tr>
</tbody>
</table>

The following distance previously set is restored when you turn back on the (CRUISE) switch.
Canceling Adaptive Cruise Control

Canceling by driver operation (models without Lane Keep Assist)

Either of the following operations will cancel Adaptive Cruise Control.

- Press the CANCEL switch.

- Depress the brake pedal.

  (Adaptive Cruise Control indicator) changes from green to white while the set vehicle target speed remains displayed on the EyeSight display area.

- Press the (CRUISE) switch.

  (Adaptive Cruise Control indicator) and Adaptive Cruise Control will be turned off.
Canceling by driver operation (models with Lane Keep Assist)

Either of the following operations will cancel Adaptive Cruise Control.

- Depress the brake pedal.
  
  (Adaptive Cruise Control indicator) changes from green to white while the set vehicle target speed remains displayed on the EyeSight display area.

- Press the \( \text{CRUISE} \) switch.
  
  (Adaptive Cruise Control indicator) changes from green to white while the set vehicle target speed remains displayed on the EyeSight display area.
  
  When the \( \text{CRUISE} \) switch is pressed again, \( \text{CRUISE} \) (Adaptive Cruise Control indicator) and Adaptive Cruise Control will be turned off.
Automatic cancellation by the system

When the Adaptive Cruise Control system brings your vehicle to a complete stop, several short beeps will sound, and the Adaptive Cruise Control system will release control of your vehicle.

In the following cases, a buzzer will sound 1 short beep and 1 long beep and Adaptive Cruise Control is automatically canceled. (Adaptive Cruise Control indicator) changes from green to white. Also, the Adaptive Cruise Control cancellation message is displayed on the screen.

- The grade of the road is very steep.
- The Vehicle Dynamics Control or the Traction Control Function is activated.
- The vehicle speed has exceeded approximately 100 mph (160 km/h)* while cruise control is activated.
  *: For Mexico and Colombia models, 200 km/h.
- The steering wheel is turned significantly in either direction.
- The select lever is moved to a position other than  or  (models with manual mode) position.
  - Adaptive Cruise Control can be resumed after the select lever is returned to the  or  position.
- Any door (except the rear gate) is opened.
- The driver's seatbelt is unfastened.
- The X-MODE is turned on (the X-MODE indicator  illuminates).
  - Adaptive Cruise Control can be resumed after the X-MODE is turned off.

CAUTION

When the vehicle has stopped, the automatic braking function will be gradually released and the vehicle will start creeping. Make sure to stop the vehicle completely by depressing the brake pedal after the vehicle has stopped.
Adaptive Cruise Control

- The EyeSight system has stopped temporarily. (EyeSight Temporary Stop indicator: White)
  ⇒ Refer to page 107.
- The EyeSight system has a malfunction. (EyeSight Warning indicator: Yellow)
  ⇒ Refer to page 105.
- The Pre-Collision secondary braking has activated.
- Parking brake is applied.

**WARNING**

Do not use Adaptive Cruise Control on slippery roads. Doing so may result in an accident.

**CAUTION**

When shifting the select lever to the N position, Adaptive Cruise Control will be automatically canceled. Do not shift the lever to the N position unless in an emergency. Otherwise the engine brake may not operate, which could cause an accident.
Adaptive Cruise Control

NOTE

- If the EyeSight operation has temporarily stopped, the Pre-Collision Braking System OFF indicator light and Lane Departure Warning OFF indicator light illuminate, and the EyeSight temporary stop indicator is displayed on the combination meter display. ⇒ Refer to page 107.

- If EyeSight is malfunctioning, the EyeSight warning indicator is displayed on the combination meter display, and the Pre-Collision Braking System OFF indicator light and Lane Departure Warning OFF indicator light will also illuminate. If this occurs, stop the vehicle in a safe location and then turn off the engine and restart it. If the indicators remain illuminated after restarting the engine, Adaptive Cruise Control cannot be used. This will not interfere with ordinary driving. However, the system should be inspected by a SUBARU dealer as soon as possible. ⇒ Refer to page 105.

- When the operation of Adaptive Cruise Control has been automatically canceled, perform the Adaptive Cruise Control setting operation again after the condition that caused the cancellation has been corrected. If the Adaptive Cruise Control function cannot be activated even after the condition has been corrected, EyeSight may be malfunctioning. This will not interfere with ordinary driving. However, contact a SUBARU dealer and have the system inspected.
Returning to a vehicle speed that was previously set

The vehicle speed which was previously set is stored in memory. To return to that vehicle speed, press the RES/SET switch to the “RES/+” side. When (Adaptive Cruise Control indicator) changes from white to green, the system will return to the set condition.

- The vehicle speed stored in memory is erased in the following circumstances:
  - The cruise control is turned off by pressing the (CRUISE) switch.
  - The Vehicle Dynamics Control or the Traction Control Function is activated.
  - The cruise control mode was switched from Adaptive Cruise Control to Conventional Cruise Control.
- If there is no vehicle speed stored in memory (previous vehicle speed), the current vehicle speed is set when the RES/SET switch is pressed to the “RES/+” side.

⇒ Refer to page 49.
Other functions

"Obstacle Detected" warning

The "Obstacle Detected" warning is activated while Adaptive Cruise Control is following a lead vehicle. This function warns the driver when it determines that the current level of deceleration by automatic braking control is insufficient.

- When the system determines that the vehicle speed needs to be reduced manually by the driver, a warning buzzer will sound several short beeps and an interruption screen will be displayed.

- When this function activates, depress the brake pedal to decelerate and maintain an optimal following distance.

**WARNING**

- If the buzzer sounds frequently, do not use Adaptive Cruise Control.
- The "Obstacle Detected" warning will not activate in the following situations.
  - The accelerator pedal is depressed.
  - The brake pedal is depressed.
- Even when the following distance is short, the "Obstacle Detected" warning may not activate in the following situations.
  - The difference in speed with the vehicle in front is small. The two vehicles are traveling at almost the same speed.
  - The vehicle in front is traveling faster than your vehicle. The following distance is gradually increasing.
  - Another vehicle cuts into your lane very close to your vehicle.
  - The vehicle in front decelerates suddenly.
  - There are repeated uphill and downhill grades.
- The "Obstacle Detected" warning may not activate in time in the case of a vehicle that is stopped at the end of a line at a toll gate, at a stop light or intersection or in traffic congestion, or a vehicle that is moving much slower than your vehicle. EyeSight requires a speed differential in order to recognize a potential obstacle and react to it.
CAUTION

The automatic braking function is released gradually approximately 2 seconds after stopping and the vehicle starts creeping forward. Be sure to depress the brake pedal and stop the vehicle completely.

NOTE

Vehicles in front in the same traffic lane are detected by the stereo camera within a distance of approximately 360 ft (110 m) in the forward direction. However the detection distance may be reduced depending on the traffic environment, driving conditions, and conditions of the vehicle in front.
Lane Keep Assist (models with Lane Keep Assist)

The stereo camera detects lane markings (including Botts’ dots) of the lane and the system assists the steering operation by working with the electric power steering to help keep your vehicle in its lane when driving on expressways, freeways and interstate highways.

WARNING

Lane Keep Assist is not an automatic driving system. Do not overestimate the capabilities of Lane Keep Assist. It is not a system to assist inattentive driving or meant to permit driving without holding the steering wheel. Make sure to grip the steering wheel while driving. To drive safely, check the distance from the vehicle in front or from a vehicle driving in parallel with your vehicle, the surrounding conditions and the surrounding environment while driving.

If you feel that the level of control and timing by the system are different from your own driving style, the system may not support safe driving. Do not use Lane Keep Assist.

Lane Keep Assist does not always operate under all situations. If you rely only on the Lane Keep Assist to stay in a lane, it may cause an accident such as a collision with an obstacle beside your lane or with a vehicle driving in an adjacent lane.

- Check that there are no problems with the tires and brakes during a daily inspection before using the system.
  ⇒ Refer to "Warranty and Maintenance Booklet".
- The system may not operate properly under the following conditions. Do not use Lane Keep Assist.
  - The air pressure of tires is not to specification.*1
  - Tires that are unevenly worn or tires with uneven wear patterns are installed.*1
  - Tires that are the wrong size are installed.*1

*1
The wheels are out of balance (e.g., the balance weight is removed or misaligned).¹1
- The wheels are out of alignment.¹
- A flat tire has been fixed temporarily with a tire repair kit.
- The suspension has been modified (including genuine SUBARU parts).
- An object that obstructs the stereo camera’s view is installed on the vehicle.
- There is an abnormal vibration in the steering wheel or the steering wheel is heavier than usual.
- The steering wheel has been replaced with parts other than genuine SUBARU parts.
- The headlights are dirty or they have snow, ice or dirt on them. (Objects are not adequately illuminated and are difficult to detect.)
- The headlights are not aligned correctly. (Objects are not adequately illuminated and are difficult to detect.)
- The headlights, fog lights and other lights have been modified.
- Vehicle operation has become unstable due to an accident or malfunction.
- The brake system warning light (red) is illuminated.²
- A heavy cargo is loaded onto or inside the vehicle.
- The maximum number of occupants is exceeded.
- A trailer or another vehicle, etc. is being towed.
- The combination meter is not operating properly. For example, an indicator light or a warning light on the combination meter does not properly turn on or off, a beep does not sound, or the indication on the liquid-crystal display is different from when it is normal.³

¹: The wheels and tires have critically important functions. Be sure to use the appropriate ones.

²: If the brake system warning light does not turn off, immediately pull the vehicle over in a safe place and contact a SUBARU dealer to have the system inspected. For details, refer to the Owner’s Manual for your vehicle.

³: For details about the functions and operations of the combination meter, refer to the Owner’s Manual for your vehicle.
• Lane Keep Assist is designed for use on expressways, freeways, toll roads, interstate highways and similar limited access roads. It is not intended to be used in city traffic. In the following conditions, do not use Lane Keep Assist. Doing so may result in an accident.
  - Ordinary roads (roads other than those mentioned above)
    Depending on the driving environment (complexity of roads and other factors), the system may not be able to perform as the traffic conditions require, and that may result in an accident.
  - Roads with sharp corners
  - Roads with lane restrictions or tentative lanes due to construction work, etc.
  - Old lane markings remain.
  - Avoiding parked vehicles
  - Snow, puddles or snow melting agents remain on the road surface.
  - Cracks or constructed traces remain on the road surface.
  - Frozen roads, snow-covered roads or other slippery road surfaces
    The tires may spin, causing loss of control of the vehicle.
  - Entering a sharp curve into an interchange or junction, or a service area, parking area, toll booth or other facilities
  - There are changes in brightness, such as at a tunnel entrance or exit.
  - Visibility is poor due to sand, smoke or water vapor blowing in the wind, or the front vision is obscured due to water splashes, snow, dirt or dust stir up generated by the vehicle in front or oncoming traffic.
  - The windshield has become fogged, scratched, or snow, dirt or frost has adhered to it, or it is otherwise affected.
  - Rain or dirt has not been fully wiped off of the windshield. There is a risk of that the stereo camera may not detect the lanes.
  - The stereo camera’s field of view is obstructed (for example by a canoe on the roof of the vehicle).
Lane Keep Assist (models with Lane Keep Assist)

- The stereo camera may have difficulty detecting the lane markings under the following conditions and the system may not operate properly.
  - At night or in a tunnel without the headlights on
  - Light is poor in the evening or early morning.
  - In bad weather (for example, rain or snow)
  - The road surface is wet and shining by reflected sunlight.
  - The distance between your vehicle and the vehicle in front is short, making it difficult to detect lane markings.
  - A vehicle intruded from an adjacent lane or the vehicle in front changed lanes.
  - The shape of a curve in the road suddenly changes.
  - Shadows of guardrails or similar objects are overlapped on the lane markings.
  - Strong light is coming from the front (sunlight or headlight beams of oncoming traffic, etc.).
  - The width of a lane is either too narrow or too wide.
  - The width of a lane has changed.
  - The stereo camera may have difficulty detecting the lane due to the performance of the camera.
    • There are no lane markings or they are very worn.
    • The lane markings are painted in yellow.
    • The lane markings are similar in color to the road surface.
    • The lane markings are drawn in double.
    • The width of lane markings is narrow.
    • Lines that are not lane markings are painted on roads.
    • The lane markings are touching the walls and poles.
  - The shape of lane markings suddenly changes (entrance/exit of a curve, crank and winding road, etc.).
  - There is a curb or a side wall on the road shoulder.
  - The brightness changes such as when you drive under an overpass.
Lane Keep Assist (models with Lane Keep Assist)

**CAUTION**

- The performance of Lane Keep Assist may not be optimal under the following conditions. In addition, Lane Keep Assist may not operate or the operation may be canceled.
  - Immediately after the weight of your vehicle changes radically
  - Immediately after the replacement of a tire or the adjustment of tire pressure
  - Immediately after the adjustment, repair or replacement of the camera or related components
  - Immediately after the repair or replacement of the suspension or steering system
  - A winter tire or a tire other than a genuine SUBARU tire is used.
  - The vehicle is in a crosswind.
  - The road grade abruptly changes (uphill or downhill).
  - The grade of the crossing direction in a road is large or changes abruptly.
  - Unevenness, winding and joint of a road surface
  - The acceleration/deceleration is high.
  - Immediately after starting the engine when the outside temperature is low.
  - The outside temperature is high.

- When you do not use Lane Keep Assist, make sure to turn off the (Lane Keep Assist) switch. If the switch is left on, the function may operate unexpectedly, causing an accident.

- If you turn on the (Lane Keep Assist) switch, the operation power of electric power steering may change.
Lane Keep Assist (models with Lane Keep Assist)

The system detects lane markings in order to help prevent departure from the lane. If you drive on expressways, freeways or interstate highways at speeds above approximately 37 mph (60 km/h) and the vehicle is about to depart from the lane, the system assists the steering operation by turning it to the direction that will help prevent the lane departure.

---

Lane Departure Prevention Function

The system detects lane markings in order to help prevent departure from the lane. If you drive on expressways, freeways or interstate highways at speeds above approximately 37 mph (60 km/h) and the vehicle is about to depart from the lane, the system assists the steering operation by turning it to the direction that will help prevent the lane departure.

---

■ How to use Lane Departure Prevention Function

Press the (Lane Keep Assist) switch.
Lane Keep Assist is turned on, and (Lane Keep Assist indicator) (white) and lane indicator (gray) are displayed on the EyeSight display area of the combination meter display.
Lane Keep Assist (models with Lane Keep Assist)

Press the \[\text{(Lane Keep Assist)}\] switch once again to turn off Lane Departure Prevention Function, and \[\text{(Lane Keep Assist indicator)}\] is turned off on the EyeSight display area.

The Lane Departure Prevention Function goes into the standby status, and the lane indicator illuminates when all of the following conditions are met:
- The vehicle speed is between approximately 37 mph (60 km/h) and 90 mph (145 km/h).
- The system is detecting the lane markings.
- The driver is operating the steering wheel.
- On a road that has a lane width that is between approximately 10 ft (3 m) and 15 ft (4.5 m)
- On a straight road or gentle curve
- Driving near the center of a lane

When the vehicle is about to depart from the lane, Lane Departure Prevention Function starts to operate and \[\text{(Lane Keep Assist indicator)}\] turns from white to green while it is operating.
Lane Keep Assist (models with Lane Keep Assist)

**NOTE**

- If you just lightly put your hands on the steering wheel for a certain period of time or if you do not operate the steering wheel, the function will temporarily be canceled. (Lane Keep Assist indicator) illuminates in white again. Also, the Lane Keep Assist cancellation message is displayed on the screen.
- Lane Departure Prevention Function operates when the system determines that the vehicle will depart from the lane if you continue to drive in the same manner. Therefore, it operates at an earlier timing than Lane Departure Warning (⇒ refer to page 82). It may depend on the surrounding environment and road condition.
- The lane indicator in the standby status and in operation may illuminate only on the left side or right side.
- The ON/OFF status of the Lane Keep Assist is restored when you restart the engine.
Canceling Lane Departure Prevention Function

Canceling by driver operation (in case no beep sounds)

The following operation cancels Lane Departure Prevention Function. If Lane Departure Prevention Function is canceled, (Lane Keep Assist indicator) and the lane indicator are turned off on the EyeSight display area.
- Press the (Lane Keep Assist) switch.

Either of the following operations temporarily cancels the Lane Departure Prevention Function.

While temporarily canceling this function, (Lane Keep Assist indicator) on the EyeSight display area illuminates in white and the lane indicator turns to gray.
- Depressing the brake pedal strongly
- Operating the turn signal lever
- The system determines that the driver operates the steering wheel to make a lane change.
- Turning on the hazard warning flasher switch

Automatic cancellation by the system (an audible beep will sound)

Under the following conditions, a beep sounds and the Lane Departure Prevention Function is temporarily canceled.

While the function is temporarily canceled, (Lane Keep Assist indicator) on the EyeSight display area illuminates in white and the lane indicator turns to gray. Also, the Lane Keep Assist cancellation message is displayed on the combination meter display.
- The system does not detect the lane markings.
- The windshield wiper operates at a high speed.
- The vehicle speed is less than approximately 34 mph (55 km/h) or is more than approximately 93 mph (150 km/h).
- The Vehicle Dynamics Control or the Traction Control Function is activated.
- Either the driver’s door, the front passenger’s door or the rear door is open.
- The seatbelt of driver’s seat is unfastened.
- The select lever is moved to a position other than P, M (models with manual mode) or L (models with L position) position.
- Lane Departure Prevention Function can be resumed after the select lever is returned to the P, M or L position.
- Parking brake is applied.
Lane Keep Assist (models with Lane Keep Assist)

- The system does not detect the steering operation by the driver for a certain period of time.
  - When the system detects no steering operation, the interruption screen appears on the combination meter display. The interruption screen continues to appear until the system detects the steering operation. If the system still does not detect the steering operation, the Lane Departure Prevention Function is temporarily canceled.
- Entering a sharp curve
- On a sharp curve
- Due to the road condition
- Due to another system operating
- The EyeSight system has stopped temporarily. (EyeSight Temporary Stop indicator: White)
  ⇒ Refer to page 107.
- The EyeSight system has a malfunction. (EyeSight Warning indicator: Yellow)
  ⇒ Refer to page 105.

**NOTE**

If the function is automatically canceled during the standby status (Lane Keep Assist indicator) illuminates in white), no beep sounds.
Pre-Collision Throttle Management

When an obstacle is detected in front of the vehicle, and the vehicle is stopped or traveling very slowly, if the system determines that the accelerator pedal has been depressed by more than the necessary amount (due to driver error), it greatly restricts engine output and ensures that vehicle forward movement is slower than normal in order to give the driver additional time to brake or react.

During system operation, a warning buzzer will sound several short beeps and an interruption screen will be displayed. This function only activates when the select lever is in the ,  (models with manual mode) or  (models with  position) position.

**WARNING**

- Do not rely excessively on Pre-Collision Throttle Management. Pre-Collision Throttle Management is not designed to help you avoid collisions in all situations. Always check the select lever and pedal positions as well as the surrounding environment before starting and operating the vehicle. Relying only on Pre-Collision Throttle Management could result in an accident.
- Pre-Collision Throttle Management is not designed to maintain the vehicle in a stopped condition.
- Pre-Collision Throttle Management will not reduce acceleration under all conditions. It is also not designed to prevent collisions.
- Pre-Collision Throttle Management will operate when an obstacle is detected in front. However, this function will not reduce acceleration in cases where no obstacle is detected (for example when approaching a cliff, etc.).
- Do not intentionally depress the accelerator pedal excessively when there are obstacles nearby. If the driver relies only on Pre-Collision Throttle Management to control acceleration, collisions may occur.
If your vehicle is trapped on a railroad crossing and you are trying to escape by driving through the crossing gate, the stereo camera may recognize the crossing gate as an obstacle and Pre-Collision Throttle Management system may activate. In this case, remain calm and either continue to depress the accelerator pedal or turn off the Pre-Collision Throttle Management system. Refer to page 81.

Pre-Collision Throttle Management may not activate depending on the following conditions:

- The distance between your vehicle and the obstacle, speed difference, and horizontal offset
- Recognition status of the stereo camera
  In particular, the function may not activate in the following cases:
  - Bad weather (for example heavy rain, a blizzard or thick fog)
  - Visibility is poor due to sand or smoke in the air.
  - Light is poor in the evening, early morning, or at night.
  - In a dark area (indoor parking area, etc.)
  - There is an obstacle outside the area illuminated by the headlights.
  - Strong light is coming from the front (for example sunlight at sunrise or sunset headlight beams, etc.).
  - The windshield has become fogged, scratched, or snow, dirt, dust or frost has adhered to it, or it is otherwise affected.
  - Fluid has not been fully wiped off the windshield during or after use of the window washer.
  - Obstacles cannot be correctly recognized due to water droplets from rain or the washer, or the wiper blades obstructing the stereo camera’s field of view.
  - The stereo camera’s field of view is obstructed (for example by a canoe on the roof of the vehicle).
  - With low obstacles (low wall, crash barrier, low vehicle, etc.)
  - The size and height of an obstacle is smaller than the limitations of the stereo camera’s recognition capability.
    - With small animals or children
    - With pedestrians who are sitting or lying down

Continued on next page ⇒
Pre-Collision Throttle Management

Continued from previous page

- The rear portion nearest your vehicle is too small or too close (such as a trailer or oncoming vehicle). The system may not recognize the part of that vehicle which is closest to you.

- There is a fence or wall, etc., with a uniform pattern (striped pattern, brick, etc.) or with no pattern in front.
- There is a wall or door made of glass or a mirror in front.
- An obstacle (another vehicle, motorcycle, bicycle, pedestrian, animal or child, etc.) cuts in from the side or jumps out suddenly.
- Your vehicle is immediately behind an obstacle after changing lanes.
- On sharp curves, steep uphill grades or steep downhill grades.
- The system determines that steering operation by the driver is intended as evasive action.

- For your safety, do not test Pre-Collision Throttle Management on its own. It may operate improperly and cause an accident.
• In the following situations, turn off Pre-Collision Throttle Management. Otherwise Pre-Collision Throttle Management may activate unexpectedly.
  - The vehicle is being towed.
  - The vehicle is being loaded onto a carrier.
  - A chassis dynamometer, free-rollers or similar equipment is being used.
  - A mechanic lifts up the vehicle, starts the engine and allows the wheels to spin freely.
  - Driving on a race track
  - Passing hanging banners, flags or branches
  - Thick/tall vegetation is touching the vehicle.
• The Pre-Collision Throttle Management may activate in the following situations. Therefore concentrate on safe driving.
  - Your vehicle is close to the vehicle in front.
  - Passing through an automatic gate
  - Your vehicle is in a location where the grade of the road changes rapidly.
  - Passing through clouds of steam or smoke
Pre-Collision Throttle Management

Continued from previous page

- Passing through water spray from road sprinklers or snow clearing sprinklers on the road

- In adverse weather, such as heavy snow or snowstorms
- There is an obstacle on a curve or intersection.
- A vehicle or an object is being narrowly passed.
- Stopping very close to a wall or a vehicle in front

NOTE

- When the accelerator pedal is depressed for approximately 3 seconds, Pre-Collision Throttle Management will be released gradually.
- When the Pre-Collision Braking System is turned off, Pre-Collision Throttle Management is also turned off.

Refer to page 39.
Turning off Pre-Collision Throttle Management

Press and hold the Pre-Collision Braking System OFF switch for approximately 2 seconds or longer to turn off the Pre-Collision Throttle Management System. When 1 short beep sound emits, this function is turned off and the Pre-Collision Braking System OFF indicator light on the instrument panel illuminates.

To turn the system back on, press and hold the Pre-Collision Braking System OFF switch again for approximately 2 seconds or longer. When this function is turned on, the Pre-Collision Braking System OFF indicator light turns off.

⇒ Refer to page 40.

NOTE

- When Pre-Collision Throttle Management is turned off, the Pre-Collision Braking System also turns off.
- Even when Pre-Collision Throttle Management is turned off, if the engine is turned off and then restarted, Pre-Collision Throttle Management will be turned on. The system default setting when the vehicle is restarted is on.
Lane Departure Warning

When vehicle speed is approximately 30 mph (50 km/h) or more, this function warns the driver if the system detects that the vehicle is likely to depart the traffic lane. When the Lane Departure Warning activates, a buzzer sounds 3 short beeps and an interruption screen will be displayed.

WARNING

Lane Departure Warning will not operate in all conditions. It also will not automatically return the vehicle to the original lane. If the driver relies only on the Lane Departure Warning to keep the vehicle in the lane, lane departure may occur, resulting in an accident.

The Lane Departure Warning activates when it detects lane markings. However, it is not a function which can detect the edge of a road (shoulders or side ditches, etc.) and warn the driver.
CAUTION

In the following situations, the Lane Departure Warning may not activate:

- Vehicle speed is approximately 30 mph (50 km/h) or less.
- The steering wheel is turned significantly to either side.
- The vehicle is driving around a curve whose radius is 0.18 miles (300 m) or smaller.
- The brake pedal is depressed or immediately after it is depressed.
- The following distance behind a vehicle in front is short.
- The turn signal is operating.
- For approximately 4 seconds after the turn signal lever has returned to its original position
- The vehicle has not returned to the inside of the lane after the Lane Departure Warning has activated.
- The lane is narrow.
- It is difficult for the camera to detect lane markings.
  - There are no lane markings or they are very worn.
  - The lane markings are yellow.
  - The lane markings are similar in color to the road surface.
  - The lane markings are narrow.

NOTE

- The following situations may cause incorrect lane detection and a faulty Lane Departure Warning to occur.
  - There are tire tracks on a wet road or snow-covered road.
  - There are boundaries between snow and asphalt, or marks from road repair, etc.
  - There are the shadows of guardrails.
  - Lane markings are drawn in double.
  - There are some lane markings left from roadwork or markings from the previous road.
- When the Lane Departure Warning OFF indicator light is illuminated, the Lane Departure Warning is inactive.
  ⇒ Refer to page 84.
Lane Departure Warning

Turning off Lane Departure Warning

Press and hold the Lane Departure Warning OFF switch for approximately 2 seconds or longer to turn off the Lane Departure Warning. When 1 short beep sound emits, this function is turned off and the Lane Departure Warning OFF indicator light on the instrument panel will illuminate.

To turn the function back on, press and hold the Lane Departure Warning OFF switch again for approximately 2 seconds or longer. When the function is turned on, the Lane Departure Warning OFF indicator light turns off.

NOTE

- When the Lane Departure Warning is turned off, the Lane Sway Warning is also turned off.
- The ON/OFF status of the Lane Departure Warning is restored when you restart the engine.

Lane Departure Warning OFF indicator light

This indicator illuminates when the ignition switch is turned to the ON position, and then approximately 7 seconds after the engine starts, it turns off or remains illuminated depending on the current status (ON or OFF).

It turns on when the Lane Departure Warning is turned off.

It also illuminates under the following conditions.
- The EyeSight system has a malfunction.
  ⇒ Refer to page 105.
- The EyeSight system has stopped temporarily.
  ⇒ Refer to page 107.
Lane Sway Warning

This function detects swaying or drifting within a lane, and warns the driver. When Lane Sway Warning activates, a buzzer sounds 3 short beeps and an interruption screen will be displayed.

This function activates when the vehicle speed exceeds approximately 37 mph (60 km/h) and deactivates when the vehicle speed falls below approximately 25 mph (40 km/h). The function will reactivate when the vehicle speed is increased to exceed approximately 37 mph (60 km/h).

*: The lines on the right and left blink alternately.

WARNING

Lane Sway Warning will not operate in all conditions. It also will not automatically correct swaying. If the driver relies only on the Lane Sway Warning to prevent the vehicle from swaying, an accident may occur.

CAUTION

Under the following conditions, the Lane Sway Warning may not operate.
- On a winding road
- The vehicle speed changes greatly.
- Immediately after a lane change
- It is difficult for the EyeSight stereo camera to detect lane markings.
  - There are no lane markings or they are the very worn.
  - The lane markings are yellow.
  - The lane markings are similar in color to the road surface.
  - The lane markings are narrow.
NOTE

- Swaying detection is based on several minutes of prior driving data. Swaying will not be detected immediately after the vehicle starts to sway. In addition, the warning may continue for some time even after swaying stops.
- Lane Sway Warning is just a function that warns the driver. When the driver is tired, not concentrating on the road or not paying adequate attention to driving, be sure to take rest breaks as often as needed.
- Under the following conditions, Lane Sway Warning will not operate.
  - Lane Keep Assist is operated.
    ⇒ Refer to page 66.
  - The Lane Departure Warning OFF indicator light is illuminated.
    ⇒ Refer to page 84.
Turning off Lane Sway Warning

Press and hold the Lane Departure Warning OFF switch for approximately 2 seconds or longer to turn off the Lane Sway Warning. When 1 short beep sound emits, this function is turned off and the Lane Departure Warning OFF indicator light on the instrument panel illuminates.

To turn the function back on, press and hold the Lane Departure Warning OFF switch again for approximately 2 seconds or longer. When the function is turned on, the Lane Departure Warning OFF indicator light turns off.

⇒ Refer to page 84.

NOTE

• When the Lane Sway Warning is turned off, the Lane Departure Warning is also turned off.
• The ON/OFF status of the Lane Sway Warning is restored when you restart the engine.
Lead Vehicle Start Alert

When the vehicle stopped in front starts to move, the Lead Vehicle Start Alert notifies the driver by indicator on the combination meter display and buzzer. When the vehicle in front remains stopped continuously (within a following distance of approximately 32 ft (10 m) and the driver’s vehicle remains stopped for several seconds or longer), the system continues to detect the vehicle in front and this alarm activates if the vehicle in front advances approximately 10 ft (3 m) or more while the driver’s vehicle remains stationary. This function only activates when the select lever is in the D, M (models with manual mode), L (models with L position) or N position.

When the Lead Vehicle Start Alert activates, a buzzer sounds a two-tone beep and an interruption screen will be displayed.

**WARNING**

Even after alerts are given audibly and through the display of an indicator, be sure to carefully check the area surrounding the vehicle before pulling away. Relying solely on the Lead Vehicle Start Alert may result in an accident.
NOTE

- The Lead Vehicle Start Alert setting can be turned on or off.  
  ⇒ Refer to page 109.
- Under the following conditions, the Lead Vehicle Start Alert may activate even when the vehicle in front has not started to move, or may not activate even after the vehicle in front has started to move:
  - A motorcycle or similar object cuts in between your vehicle and the stopped vehicle in front.
  - Weather or road conditions may interfere with the detection of the vehicle in front.
  - The EyeSight stereo camera loses detection of the vehicle in front.
- Under the following conditions, the Lead Vehicle Start Alert will not activate:
  - The EyeSight system has a malfunction.  
    ⇒ Refer to page 105.
  - The EyeSight system has stopped temporarily.  
    ⇒ Refer to page 107.
Conventional Cruise Control

About Conventional Cruise Control

Conventional Cruise Control is a driving support system intended to allow more comfortable driving on expressways, freeways and interstate highways. It can be used to travel at a constant speed by maintaining the vehicle speed set by the driver. Please remember that you should not exceed posted speed limits.

**WARNING**

- When Conventional Cruise Control is functioning, the system does not perform the following control to maintain a following distance, as when using Adaptive Cruise Control.
  
- Strive for safe driving and depress the brake pedal to decelerate the vehicle as necessary in order to ensure a safe following distance from the vehicle in front.

- Under the following conditions, do not use the Conventional Cruise Control. Doing so may result in an accident.
  
  - Roads with heavy traffic or roads with sharp curves
    
  - Frozen roads, snow-covered roads or slippery road surfaces
    
  - Steep downhill grades
    
  - On a steep continuous downhill grade
    
  - The set vehicle speed may be exceeded.
    
- When using Conventional Cruise Control, always set the speed according to the speed limit, traffic flow, road conditions, and other conditions.

**CAUTION**

When using Cruise Control, be sure to check the EyeSight display area to confirm which Cruise Control mode is selected: Adaptive Cruise Control or Conventional Cruise Control.

- If Adaptive Cruise Control is selected, \[\text{Adaptive Cruise Control indicator}\] illuminates.
- If Conventional Cruise Control is selected, \[\text{Conventional Cruise Control indicator}\] illuminates.
**NOTE**

- When the CRUISE switch is first turned on, the Adaptive Cruise Control is activated.
- To change the Cruise Control mode, press and hold the Follow-distance setting switch for approximately 2 seconds or longer. (This is effective only when the main Cruise Control is on and neither Adaptive Cruise Control nor Conventional Cruise Control are activated.)
- Conventional Cruise Control can be used even when EyeSight is temporarily turned off.
How to use Conventional Cruise Control

■ Setting Conventional Cruise Control

(1) Setting Adaptive Cruise Control to standby status.

Press the (CRUISE) switch. At this time, (Adaptive Cruise Control indicator) (white) and the following distance setting indicator are displayed on the EyeSight display area of the combination meter display. The set vehicle speed display will read "- - MPH (- - km/h)".

When the (CRUISE) switch is pressed, the initial cruise control mode is always Adaptive Cruise Control.

If the (CRUISE) switch is pressed once more, the EyeSight display will turn off. It will also automatically turn off when the engine is stopped.
(2) Switch to Conventional Cruise Control.
Press and hold the \( / \) (Following distance setting) switch for approximately 2 seconds or longer to switch from Adaptive Cruise Control to Conventional Cruise Control. A buzzer sounds 1 short beep.
At this time, the following distance setting indicator on the EyeSight display area of the combination meter display turns off and \( \) (Conventional Cruise Control indicator) (white) is displayed.

To set the ready status:
Conventional Cruise Control can be activated when all of the following conditions are met and \( \) (READY indicator) is displayed on the EyeSight display area.
- All doors (except the rear gate) are closed.
- The driver’s seatbelt is fastened.
- The select lever is in the \( D \) or \( M \) (models with manual mode) position.
- The brake pedal is not depressed.
- The road is not on a steep slope.
- The steering wheel has not been turned significantly in either direction.
- The X-MODE is not turned on (the X-MODE indicator \( \) goes off).
- The vehicle speed is between approximately 20 mph (30 km/h) and 90 mph (145 km/h)*
  *: For Mexico and Colombia models, approximately 30 km/h and 200 km/h.
- Parking brake is released.

(3) Control the accelerator pedal to reach the desired speed.
Conventional Cruise Control

(4) When the vehicle reaches the desired speed, press the RES/SET switch to the "RES/+" side or the "SET/-" side.
The vehicle speed at the time when the switch is pressed will become the set vehicle speed, and constant speed driving will initiate.
When Conventional Cruise Control is activated, (READY indicator) turns off, the set vehicle speed is displayed and (Conventional Cruise Control indicator) changes from white to green.

WARNING
- The "Obstacle Detected" warning will not activate while Conventional Cruise Control is functioning.
- When using Conventional Cruise Control, always set the speed according to the speed limit, traffic flow, road conditions, and other conditions.

CAUTION
During Conventional Cruise Control use, accelerator and brake control to follow the vehicle in front is not performed. Operate the accelerator and brake pedals as necessary.
NOTE

- On a downhill grade, automatic braking may operate in order to maintain the set vehicle speed.
- When driving on a curve, the vehicle may not accelerate, or may decelerate, even if the set speed is higher than the current vehicle speed.
- To return to Adaptive Cruise Control use, cancel Conventional Cruise Control and then briefly press the \( / \) (Following distance setting) switch. A buzzer will sound (one short beep) when switching to Adaptive Cruise Control.
Increasing the set vehicle speed

The following two methods can be used to increase the set vehicle speed.

● Using the RES/SET switch
  - Push to the “RES/+” side briefly.
    Every time the switch is pushed, the set vehicle target speed will increase to the next 5 mph (5 km/h) increment.
  - Push to the “RES/+” side continuously.
    While the switch is being pushed, the set vehicle target speed will increase in increments of 1 mph (1 km/h).
  When operating the switch, the set vehicle target speed changes on the combination meter display.

● Using the accelerator pedal
  Operate the accelerator pedal to increase the vehicle speed.
  When the desired speed is reached, press the RES/SET switch to the “SET/-” side. When the switch is released, the new vehicle speed is set.
Conventional Cruise Control

■ Decreasing the set vehicle speed

● Using the RES/SET switch
  • Push to the “SET/+” side briefly.
    Every time the switch is pushed, the set vehicle target speed will decrease to the next 5 mph (5 km/h) decrement.
  • Push to the “SET/-” side continuously.
    While the switch is being pushed, the set vehicle target speed will decrease in decrements of 1 mph (1 km/h).
    When operating the switch, the set vehicle target speed changes on the combination meter display.

● Using the brake pedal
  1. Depress the brake pedal to decrease the vehicle speed. Conventional Cruise Control will be canceled and (Conventional Cruise Control indicator) changes from green to white.
  2. When the desired speed is reached, press the RES/SET switch to the “SET/-” side. The speed at the time of pressing the switch will be set as the new vehicle speed, and it appears on the EyeSight display area.

■ Accelerating temporarily

Depress the accelerator pedal to accelerate temporarily.
When the accelerator pedal is released, the vehicle returns to the set vehicle speed.
Conventional Cruise Control

■ Decelerating temporarily
Depress the brake pedal to decelerate temporarily. When the brake pedal is depressed, Conventional Cruise Control will be canceled. While the set vehicle target speed remains displayed on the EyeSight display area, (Conventional Cruise Control indicator) changes from green to white. Release the brake pedal and press the RES/SET switch to the “RES/+” side to reset the set vehicle target speed.

■ Canceling Conventional Cruise Control
● Canceling by driver operation (models without Lane Keep Assist)
Any of the following operations will cancel Conventional Cruise Control.
• Press the CANCEL switch.

• Depress the brake pedal.
(Conventional Cruise Control indicator) changes from green to white while the set vehicle target speed remains displayed on the EyeSight display area.
Conventional Cruise Control

- Press the \( \text{CRUISE} \) switch.

\( \text{(Conventional Cruise Control indicator)} \) and Conventional Cruise Control will be turned off.

- Canceling by driver operation (models with Lane Keep Assist)

Any of the following operations will cancel Conventional Cruise Control.

- Depress the brake pedal.

\( \text{(Conventional Cruise Control indicator)} \) changes from green to white while the set vehicle target speed remains displayed on the EyeSight display area.

- Press the \( \text{CRUISE} \) switch.

\( \text{(Conventional Cruise Control indicator)} \) changes from green to white while the set vehicle target speed remains displayed on the EyeSight display area.

When the \( \text{CRUISE} \) switch is pressed again, \( \text{(Conventional Cruise Control indicator)} \) and Conventional Cruise Control will be turned off.
Conventional Cruise Control

Automatic cancellation by the system
In the following cases, a buzzer sounds 1 short beep and 1 long beep and the cruise control function is automatically canceled. (Conventional Cruise Control indicator) changes from green to white. Also, the Conventional Cruise Control cancellation message is displayed on the screen. After the conditions listed below have been resolved, perform the cruise control set operation again to reactivate cruise control.
• The select lever is moved to a position other than D or M (models with manual mode) position.
  - Conventional Cruise Control can be resumed after the select lever is returned to the D or M position.
• Vehicle speed drops to approximately 16 mph (25 km/h) or less (due to a steep uphill grade or some other reason).
• The X-MODE is turned on (the X-MODE indicator illuminates).
  - Conventional Cruise Control can be resumed after the X-MODE is turned off.
• Vehicle speed increases to approximately 100 mph (160 km/h)* or more.
  *: For Mexico and Colombia models, 220 km/h.
• The Vehicle Dynamics Control or the Traction Control Function is activated.
• Any door (except the rear gate) is opened.
• The driver’s seatbelt is unfastened.
• The EyeSight system has a malfunction. (EyeSight Warning indicator: Yellow)
  ⇒ Refer to page 105.
• The steering wheel is turned significantly in either direction.
• The grade of the road is steep.
• The Pre-Collision secondary braking has activated.
• Parking brake is applied.

WARNING
Do not use Conventional Cruise Control on slippery roads. Doing so may result in an accident.
Conventional Cruise Control

### CAUTION

When shifting the select lever to the N position, Conventional Cruise Control will be automatically canceled. Do not shift the lever to the N position unless it is an emergency. Otherwise the engine brake may not operate, which could cause an accident.

### NOTE

- If EyeSight is malfunctioning, the EyeSight warning indicator is displayed on the combination meter display and the Pre-Collision Braking System OFF indicator light and Lane Departure Warning OFF indicator light illuminate. If this occurs, stop the vehicle in a safe location and then turn off the engine and restart it. If the indicators remain illuminated after restarting the engine, Conventional Cruise Control cannot be used. This will not interfere with ordinary driving. However, the system should be inspected by a SUBARU dealer as soon as possible.
  
  ⇒ Refer to page 105.

- When operation of Conventional Cruise Control has been automatically canceled, perform the set operation again after the condition that caused the cancellation has been resolved. If cruise control cannot be activated even after the condition has been corrected, EyeSight may be malfunctioning. This will not interfere with ordinary driving. However, the system should be inspected by a SUBARU dealer as soon as possible.
Resuming a vehicle speed that was previously stored

A vehicle speed previously set is stored in memory. To recall and set that vehicle speed, press the RES/SET switch to the "RES/+" side. The EyeSight display area shows the set condition again.

Resuming is possible when a vehicle speed was previously set, and the current vehicle speed is approximately 20 mph (30 km/h) or more.

NOTE

- The vehicle speed stored in memory is erased in the following circumstances:
  - The cruise control is turned off by pressing the (CRUISE) switch.
  - The Vehicle Dynamics Control or the Traction Control Function is activated.
  - The cruise control mode was switched from Conventional Cruise Control to Adaptive Cruise Control.
- The vehicle drives constantly and correspondingly to the set vehicle speed between 20 mph (30 km/h) and 90 mph (145 km/h)*.
  *: For Mexico and Colombia models, 30 km/h and 200 km/h.
- If there is no vehicle speed stored in memory (previous vehicle speed), the current vehicle speed is set when the RES/SET switch is pressed to the "RES/+" side.
  ⇒ Refer to page 94.

</table>

*: The buzzer that indicates when a lead vehicle is detected or when it is no longer detected (Lead Vehicle Acquisition Sound), as well as the Lead Vehicle Start Alert can be turned on or off. 
⇒ Refer to page 109.
EyeSight malfunction and temporary stop

If a malfunction is detected in the EyeSight system, the indicators in the instrument panel and the combination meter display inform the driver of the malfunction. Check the displayed contents and take the appropriate action.

■ Malfunction (including position/angle misalignment of stereo camera)

The buzzer sounds 1 short beep and the EyeSight warning indicator (yellow) flashes or illuminates. At the same time, the Pre-Collision Braking System OFF indicator light and the Lane Departure Warning OFF indicator light will illuminate. A message will also be displayed on the combination meter display.

<table>
<thead>
<tr>
<th>Displayed screen</th>
<th>Cause</th>
<th>Action</th>

</thead>
<tbody>
<tr>
<td>EyeSight Off Check Manual</td>
<td>An EyeSight malfunction or position/angle misalignment of stereo camera has occurred.</td>
<td>Inspection and adjustment is necessary. Contact your SUBARU dealer.</td>
</tr>
</tbody>
</table>

**CAUTION**

If both the EyeSight warning indicator and the CHECK ENGINE warning light/malfunction indicator light illuminate at the same time while driving, have your vehicle checked/repai red by a SUBARU dealer as soon as possible. EyeSight cannot be used if there is an abnormality with the engine, etc.
EyeSight malfunction and temporary stop

**NOTE**

- If the EyeSight warning indicator is illuminating or flashing, stop the vehicle in a safe location, turn off the engine, and then restart it.
- If the indicator continues illuminating or flashing even after the engine has been restarted, the EyeSight system has a malfunction. In this case, all EyeSight functions will be stopped. Normal driving will still be possible. However, contact a SUBARU dealer for an inspection.
- If the EyeSight warning indicator illuminates or flashes, the RAB system will not operate (models equipped with RAB).
- If the EyeSight warning indicator illuminates or flashes, the BSD/RCTA system may not operate (models equipped with BSD/RCTA).
## Temporary stop

The buzzer will sound one short beep, and the EyeSight temporary stop indicator (white), Pre-Collision Braking System OFF indicator light and Lane Departure Warning OFF indicator light will illuminate at the same time.

A message will also be displayed on the combination meter display.

When the cause has been resolved, temporary stop will be canceled and the EyeSight system will automatically restart.

<table>
<thead>
<tr>

</tbody>
</table>
### Displayed screen

<table>
<thead>
<tr>
<th>EyeSight Disabled</th>
</tr>
</thead>
</table>

### Cause

- The EyeSight system is starting up.
- The system has determined that the vehicle is extremely inclined.
- The Pre-Collision secondary braking has operated 3 times after the engine was started.
- The engine has stopped.
- The electronic power steering system is in the overheating prevention status because the steering wheel has been operated while the vehicle is at a standstill or driving at an extremely slow speed.
- The EyeSight system judged a different value due to the removal or installation of the steering wheel.
- The wheels are out of balance.
- The wheels are out of alignment.

### Action

The system will restart once the cause has been resolved. At this time, it may take some time for the system to restart.

If the system does not restart, even after the conditions have improved and a period of time has elapsed, contact your SUBARU dealer for an inspection.

---

**NOTE**

- When the EyeSight temporary stop indicator is illuminated, no EyeSight functions can be used except for Conventional Cruise Control.
- When the EyeSight temporary stop indicator is illuminated, the RAB system may not operate (models equipped with RAB).
Customizing functions

The following settings can be changed on the combination meter display.

<table>
<thead>
<tr>

</tr>
<tr>
<td>Select Drive on Left/Drive on Right</td>
<td>Drive on Left/</td>
<td>Drive on Right</td>
</tr>
<tr>
<td></td>
<td>Drive on Right</td>
<td></td>
</tr>
</tbody>
</table>

**NOTE**

The following settings can be restored to the factory (default) settings.
⇒ Refer to the Owner’s Manual for your vehicle.

**How to customize**

Operations can be performed when the select lever is in the P position and the ignition switch is in the ON position while the vehicle is parked. However, the Cruise Control Acceleration Characteristics and warning volume can be changed, even while you are driving.

1. Pull the ▲/▼ switch toward you to display the “Change settings” screen.
   Pull and hold the № (Info)/SET switch to change to the settings screen.

2. Pull the ▲/▼ switch toward you, select “EyeSight”, and pull the № (Info)/SET switch to confirm.
   The system will then switch to the EyeSight settings screen.

Operate the following switches according to the display on the screen.
- Select: ▲ (Return) switch/
 ▼ (Send) switch
- Confirm: № (Info)/SET switch
Customizing functions

● Warning Volume setting
The volume can be set to Max/Mid/Min. When on the Warning Volume settings screen, if the volume is selected with the \( \uparrow / \downarrow \) switch, 3 short beeps will sound.

● Lead Vehicle Acquisition Sound setting
The Lead Vehicle Acquisition Sound setting can be activated (ON) or deactivated (OFF).

● Lead Vehicle Moving Monitor Function
The Lead Vehicle Start Alert function setting can be activated (ON) or deactivated (OFF).

● The Cruise Control Acceleration Characteristics
The Cruise Control Acceleration Characteristics of the Adaptive Cruise Control and Conventional Cruise Control system can be set to one of four levels.
Lv. 4 (Dynamic): Mode used when powerful acceleration is required.
Lv. 3 (Standard): Mode that focuses on quick response acceleration and deceleration.
Lv. 2 (Comfort): Mode that focuses on driving with smooth movement.
Lv. 1 (Eco): Mode that focuses on driving with smooth movement and optimum fuel economy.

● Select Drive on Left/Drive on Right (Driving Lane Customize)
It is possible to switch between driving on the left-hand side of the road and driving on the right-hand side.
The Adaptive Cruise Control (⇒ refer to page 41) function is adapted to the set traffic lane direction.

⚠️ WARNING
If the Driving Lane Customize setting does not match the flow of traffic, full EyeSight performance may not be available.

devil NOTE
When “Return” is selected, the system will return to the screen 1 level above the current one.

● Canceling the custom functions
In the following cases, the custom functions will be canceled and the “Change settings” screen will be displayed.
• The \( \text{(Info)/SET} \) switch is pulled and held.
• The engine is turned off.
• The switch is not operated for approximately 30 seconds.
Message screen list

If an EyeSight warning or malfunction is detected, a message will be displayed on the combination meter display. Depending on the message, a buzzer will sound at the same time.

If a message is displayed, refer to the message list and take the appropriate action. While the mark is illuminated, you can pull the (Info)/SET switch to display the message again.

<tr>
<td>1.</td>
<td>Adaptive Cruise Control cannot be activated.</td>
</tr>
<tr>
<td>2.</td>
<td>Did you remember to press the CRUISE switch? If you have not pressed the CRUISE switch, the Adaptive Cruise Control indicator will not be shown.</td>
</tr>
<tr>
<td>3.</td>
<td>Is EyeSight operation temporarily stopped? When EyeSight is temporarily stopped, the EyeSight temporary stop indicator is displayed on the combination meter display. Set Adaptive Cruise Control again after the cause for the temporary stop has been corrected.</td>
</tr>
<tr>
<td>4.</td>
<td>Is READY (READY indicator) displayed? Adaptive Cruise Control cannot be activated when READY (READY indicator) is not displayed. Set Adaptive Cruise Control when READY (READY indicator) is displayed.</td>
</tr>
<tr>
<td>5.</td>
<td>READY (READY indicator) is not displayed.</td>
</tr>
<tr>
<td>6.</td>
<td>Are the requirements for setting cruise control met? For the conditions of READY (READY indicator) illumination, refer to the following pages.</td>
</tr>
</tbody>
</table>
A vehicle (in front of your vehicle) is not detected, detection is delayed or detection is lost quickly.

Is the vehicle in front stopped, moving slowly relative to your vehicle or moving extremely slowly?
Detection of stopped vehicles, vehicle moving slowly relative to your vehicle, and vehicles moving extremely slowly may be difficult.

Is the windshield dirty or fogged?
If the windshield is dirty or fogged, it may not be possible to detect object or vehicles. Clean off the dirt or fog from the windshield, and then try using the system again.

Is the vehicle in front far away?
The maximum detection distance of EyeSight’s stereo camera is approximately 360 ft (110 m). Detection is not possible if the vehicle is farther away.

Is the vehicle on a curve?
The detection range is limited in the horizontal directions when the stereo camera is properly aimed.

Is the vehicle on a road with repeated uphill and downhill grades (such as an overpass), or on a banked road?
The detection range is limited in the vertical directions.

Did the vehicle detected in front change?
Detection may be delayed after the vehicle in front has changed.

Have water, snow or other substances been kicked up by the vehicle in front as it drives?
When water or snow have been kicked up, it may not be possible to detect the vehicle in front.

Adaptive Cruise Control is activated even though there is no vehicle in front detected.

Is there a vehicle in the neighboring lane?
Depending on the road conditions, vehicles in neighboring lanes may be detected as well as a vehicle directly in front.

Are you driving on or near a curve?
When driving on a curve, braking control may be activated in response to guardrails, the angle of the steering wheel, or roadside structures.

The Lead Vehicle Start Alert activates, even though there is no vehicle in front.

Depending on surrounding objects, traffic environment and weather, the Lead Vehicle Start Alert may issue a warning in response to objects other than a vehicle that appears in front of your vehicle.
### Troubleshooting

<table>
<thead>
<tr>
<th>Question</th>
<th>Answer</th>
</tr>
</thead>
<tbody>
<tr>
<td>EyeSight does not restart after a temporary stop.</td>
<td>Are you driving in the rain with poorly performing wipers or is there an oily film on the windshield? Replace the wipers with new ones, or clean the oily film off the windshield. Are you driving in poor weather conditions with heavy rain, snow, fog, or dust? In these cases, EyeSight may temporarily stop operating while visibility is very poor.</td>
</tr>
<tr>
<td></td>
<td>Is your vehicle subject to sunlight from the front (sunset or sunrise, etc.) or to bright headlights from oncoming vehicles at nighttime? In these cases, EyeSight may temporarily stop operating.</td>
</tr>
<tr>
<td></td>
<td>Are you parking in an extremely hot or cold condition? In either of these cases, EyeSight may temporarily stop operating until the temperature increases or decreases to a temperature at which the camera is operable.</td>
</tr>
<tr>
<td>The timing of the “Obstacle Detected” warning is sometimes earlier or sometimes later than what seems to be normal operation.</td>
<td>The “Obstacle Detected” warning sounds when the system determines that more braking is necessary, based on conditions such as the distance from the vehicle in front and the difference in speed compared to it. As a result, timing may vary depending on how the brakes are applied in relation to the vehicle in front, and your relative speed to that vehicle.</td>
</tr>
<tr>
<td></td>
<td>When the vehicle in front has turned off the roadway or the distance from the vehicle in front has increased, acceleration is sometimes slower or faster.</td>
</tr>
<tr>
<td></td>
<td>Depending on the timing of when the detection of the vehicle in front is lost, EyeSight’s ability to react may be slower, causing the start of acceleration to feel delayed and braking time to feel longer than what seems to be normal operation.</td>
</tr>
<tr>
<td></td>
<td>What acceleration level did you select for cruise control? Acceleration may vary because the cruise control characteristics vary depending on the selected mode.</td>
</tr>
<tr>

## Troubleshooting

<table>
<thead>
<tr>
<th>Icon</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>🤔</td>
<td>Lane Keep Assist was unexpectedly canceled. Did you take your hands off the steering wheel? Did you just lightly put your hands on the steering wheel while driving? If the system does not detect the steering operation of the driver, it will temporarily cancel Lane Keep Assist.</td>
</tr>
<tr>
<td>🤔</td>
<td>Did you turn a tight corner? Lane Keep Assist does not operate while turning a tight corner.</td>
</tr>
<tr>
<td>🤔</td>
<td>Did you perform one of the following operations? <em>Refer to page 74.</em></td>
</tr>
<tr>
<td>🤔</td>
<td>Lane Keep Assist does not operate even though there are lane markers. Is the width of the road too narrow or too wide? To operate Lane Keep Assist, the width of the road should be between approximately 10 ft (3 m) and 15 ft (4.5 m).</td>
</tr>
